| Notes:<br>1.<br>2. High transonic drag (HTD).<br>3. Tail Radar. Equipped with an APS-54 tail radar with ECCM 1, arc 60–, search 30–10, track 15–10, and lock-on 7–.<br>4. Articulated Guns. The guns can only fire at locked-on targets in the 60– arc. They may return fire twice per game turn in response to gun attacks or conduct one gun attack. The hit rolls are modified only by the target size. |  |  |             |  |  | 1. Station 2 is the internal bomb bay. Load options are (a) four 2,000 lb BB, (b) six 1,000 lb BB, (c) twelve 500 lb BB, or (d) two nuclear bombs. |  |  |  |  |  |

Station 3 is the internal weapons tube. It can carry one nuclear BB and two FTs or three FTs. The special FTs have a capacity of 295 gal (1100L).<br>2. May only use AGM-12 RGs. |           |                           |            |     |           |     |     |

| Notes:<br>1.<br>2. Good supersonic maneuverability (GSSM). Rapid acceleration (RA). Rapid power response (RPR).<br>3. Reconnaissance options include an oblique camera, overhead cameras, IR camera, side-looking radar, and electronic emissions recording equipment.<br>4. Bomb system is computed for level or radar bombing and ballistic otherwise. |             |            |  |            |                                      |                    |  |            |  | 1. Station 3 is the internal weapons tube. It can carry one nuclear BB and two FTs or three FTs. The special FTs have a capacity of 295 gal (1100L).                                              |  |            |  |           |  |     |
|                                                                                                                                                                                                                                                                                                                                                          |             |            |  |            |                                      |                    |  |            |  | 2. May only use AGM-12 RGs.                                                                                                                                                                       |  |            |  |           |  |     |
|                                                                                                                                                                                                                                                                                                                                                          |             |            |  |            |                                      |                    |  |            |  | 3. Although capable of carrying weapons internally and externally, in practice only three internal FTs and no external weapons or FTs were carried. The total fuel in this configuration is 1165. |  |            |  |           |  |     |

| Notes:<br>1.<br>2. Good supersonic maneuverability (GSSM). Rapid acceleration (RA). Rapid power response (RPR).<br>3. Reconnaissance options include an oblique camera, overhead cameras, IR camera, side-looking radar, and electronic emissions recording equipment.<br>4. Bomb system is computed for level or radar bombing and ballistic otherwise. |  |             |  |            |                                      |            |  |            |  | 1. Station 3 is the internal weapons tube. It can carry one nuclear BB and two FTs or three FTs. The special FTs have a capacity of 295 gal (1100L).                                              |    |           |     |            |    |           |  |     |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                          |  |             |  |            |                                      |            |  |            |  | 2. May only use AGM-12 RGs.                                                                                                                                                                       |    |           |     |            |    |           |  |     |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                          |  |             |  |            |                                      |            |  |            |  | 3. Although capable of carrying weapons internally and externally, in practice only three internal FTs and no external weapons or FTs were carried. The total fuel in this configuration is 1165. |    |           |     |            |    |           |  |     |  |     |  |  |  |

The wing stations (1 to 4 and 8 to 11) may only carry a total weight of 30,000.                                                          |     |     |  |     |  |     |  |  |  |
| 2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed by one step at the end of each turn. The data shown here are for the forward geometry. |  |           |  |           |                                      |           |  |       |  |                                        |  |         |    |         | 2. Stations 1, 2, 10, and 11 do not swivel. If used, wings must remain forward until all stores carried on them are expended or jettisoned. |     |     |  |     |  |     |  |  |  |
|                                                                                                                                                                                                              |  |           |  |           |                                      |           |  |       |  |                                        |  |         |    |         | 3. Stations 1 and 11 were never used operationally.                                                                                         |     |     |  |     |  |     |  |  |  |

The wing stations (1 to 4 and 8 to 11) may only carry a total weight of 30,000.                                                          |    |            |     |           |  |     |
| 2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed by one step at the end of each turn. The data shown here are for the aft geometry. |             |            |      |            |                     |           |                           |            |  | 2. Stations 1, 2, 10, and 11 do not swivel. If used, wings must remain forward until all stores carried on them are expended or jettisoned. |    |            |     |           |  |     |
| 3. High bleed rate (HBR). Low transonic drag (LTD). Poor supersonic maneuverability (PSSM).                                                                                                              |             |            |      |            |                     |           |                           |            |  | 3. Stations 1 and 11 were never used operationally.                                                                                         |    |            |     |           |  |     |
|                                                                                                                                                                                                          |             |            |      |            |                     |           |                           |            |  | 4. Stations 3, 4, 8, and 9 may carry one AIM-9 IRM in addition to other non-missile stores.                                                 |    |            |     |           |  |     |
|                                                                                                                                                                                                          |             |            |      |            |                     |           |                           |            |  | 5. Station 5 is the internal weapon bay. It may carry a 20 mm M61A1 gun pack (weight 2000 and load 1) and a nuclear BB or two nuclear BBs.  |    |            |     |           |  |     |
|                                                                                                                                                                                                          |             |            |      |            |                     |           |                           |            |  | 6. | Notes:<br>1. The General Dynamics-Grumman F-111B is prototype carrier-based interceptor.<br>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed by one step at the end of each turn. The data shown here are for the forward geometry. |  |           |  |           |                                                                                  |           |  |       |  | 1. May use AIM-54 AHMs, AIM-9 IRMs, and 2300L (600 gal) FTs.                                                                                                                                                                                     |  |         |    |         |     |     |     |  |     |  |     |  |
|                                                                                                                                                                                                                                                                                                          |  |           |  |           |                                                                                  |           |  |       |  | 2. Stations 1 and 7 do not swivel. If used, the wings must remain forward until all stores carried on them are expended or jettisoned.                                                                                                           |  |         |    |         |     |     |     |  |     |  |     |  |
|                                                                                                                                                                                                                                                                                                          |  |           |  |           |                                                                                  |           |  |       |  | 3. Stations 2, 3, 5, and 7 may each carry one AHM and one IRM.                                                                                                                                                                                   |  |         |    |         |     |     |     |  |     |  |     |  |
|                                                                                                                                                                                                                                                                                                          |  |           |  |           |                                                                                  |           |  |       |  | 4. Station 4 is the internal bay. It may carry two AHMs (contributing only half their normal load) or a 20 mm M61A1 gun pack (weight 2000 and load 1). The gun pack has hit rolls of 5/3/2, 10.0 ammunition, and AtA/AtG damage ratings of 6/8*. |  |         |    |         |     |     |     |  |     |  |     |  |

| Notes:<br>1. The General Dynamics-Grumman F-111B is prototype carrier-based interceptor.<br>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed by one step at the end of each turn. The data shown here are for the aft geometry.<br>3. High bleed rate (HBR). Low transonic drag (LTD). Poor supersonic maneuverability (PSSM). |  |            |  |            |                                      |           |  |       |  | 1 and 75,000 FT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |                                                                                  |  |                                                                           |  |                          |  |  |  |  |  |  |  |  |  |

|                                                                                                                                                                                                                                                                                                                                                                                                     |  |            |  |            |                                      |           |  |       |  | 1. May use AIM-54 AHMs, AIM-9 IRMs, and 2300L (600 gal) FTs.<br>2. Stations 1 and 7 do not swivel. If used, the wings must remain forward until all stores carried on them are expended or jettisoned.<br>3. Stations 2, 3, 5, and 7 may each carry one AHM and one IRM.<br>4. Station 4 is the internal bay. It may carry two AHMs (contributing only half their normal load) or a 20 mm M61A1 gun pack (weight 2000 and load 1). The gun pack has hit rolls of 5/3/2, 10.0 ammunition, and AtA/AtG damage ratings of 6/8*. |  |                                                                                  |  |                                                                           |  |                          |  |  |  |  |  |  |  |  |  |

| <div>Notes:</div> <div>1.</div> <div>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed by one step at the end of each turn. The data shown here are for the forward geometry.</div> |       |                                                                                                                |  | <div>Load Notes:</div> <div>1. The wing stations (1 to 4 and 8 to 11) may only carry a total weight of 30,000.</div> <div>2. Stations 1, 2, 10, and 11 do not swivel. If used, wings must remain forward until all stores carried on them are expended or jettisoned.</div> <div>3. Stations 1 and 11 were never used operationally.</div> <div>4. Stations 3, 4, 8, and 9 may carry one AIM-9 IRM in addition to other non-missile stores.</div> <div>5. Station 5 is the internal weapon bay. It may carry a 20 mm M61A1 gun pack (weight 2000 and load 1) and a nuclear BB or two nuclear BBs.</div> <div>6. Stations 6 and 7 are the rear centerline stations.</div> |  |                                               |       |               |          |       |       |          |       |          |             |       |                 |   |       |           |         |

| 1.                                                                                                                                                                                                       |  |             |  |           |                     |           |  |           |  | 1. The wing stations (1 to 4 and 8 to 11) may only carry a total weight of 30,000.                                                          |  |           |    |            |     |           |     |     |     |  |     |  |
| 2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed by one step at the end of each turn. The data shown here are for the mid geometry. |  |             |  |           |                     |           |  |           |  | 2. Stations 1, 2, 10, and 11 do not swivel. If used, wings must remain forward until all stores carried on them are expended or jettisoned. |  |           |    |            |     |           |     |     |     |  |     |  |
| 3. Low transonic drag (LTD). Poor supersonic maneuverability (PSSM).                                                                                                                                     |  |             |  |           |                     |           |  |           |  | 3. Stations 1 and 11 were never used operationally.                                                                                         |  |           |    |            |     |           |     |     |     |  |     |  |
|                                                                                                                                                                                                          |  |             |  |           |                     |           |  |           |  | 4. Stations 3, 4, 8, and 9 may carry one AIM-9 IRM in addition to other non-missile stores.                                                 |  |           |    |            |     |           |     |     |     |  |     |  |
|                                                                                                                                                                                                          |  |             |  |           |                     |           |  |           |  | 5. Station 5 is the internal weapon bay. It may carry a 20 mm M61A1 gun pack (weight 2000 and load 1) and a nuclear BB or two nuclear BBs.  |  |           |    |            |     |           |     |     |     |  |     |  |

| 1. The Fairchild Republic A-10A Thunderbolt II is a close-air-support aircraft. It is commonly referred to as the “Warthog” or “Hog.” |  |           |  |           |                     |           |  |       |  | 1. The load limit with full internal fuel is 14,300. Reducing internal fuel allows stores to be carried beyond this limit, at the rate of 1 fuel point for an increase of 20 in load, up to the limit of 16,000. |  |        |    |        |     |     |     |  |     |  |     |  |
| 2. High transonic drag (HTD).                                                                                                         |  |           |  |           |                     |           |  |       |  | 2. May use AIM-9 IRMs and ARMs.                                                                                                                                                                                  |  |        |    |        |     |     |     |  |     |  |     |  |
|                                                                                                                                       |  |           |  |           |                     |           |  |       |  | 3. May not use GPS-guided BS.                                                                                                                                                                                    |  |        |    |        |     |     |     |  |     |  |     |  |
|                                                                                                                                       |  |           |  |           |                     |           |  |       |  | 4. May use the AAQ-29 Litening OP.                                                                                                                                                                               |  |        |    |        |     |     |     |  |     |  |     |  |
|                                                                                                                                       |  |           |  |           |                     |           |  |       |  | VPs: 22/15/7/4                                                                                                                                                                                                   |  |        |    |        |     |     |     |  |     |  |     |  |

| Notes:<br>1. The McDonnell Douglas F/A-18A Hortnet is a carrier-capable all-weather fighter and attack aircraft. The version described here is the initial one that entered service in 1983, equipped with the APG-65 radar and ALQ-126B DJM.<br>2. Fly-by-wire (FBW). Good supersonic maneuverability (GSSM). High pitch rate (HPR). High roll rate (HRR). Rapid power response (RPR).<br>3. Maneuvering flaps at speed ≤ 3.5. |             |            |     |            |                                                                                                               |                    |                                                               |            |         | 4 and 6 500 RHM OP LP                                                                |  |                                   |  |           |  |     |

## Rockwell B-1 Lancer

The Rockwell B-1 is a long-range strategic bomber.

### Versions

#### B-1A

The original B-1A was designed and developed as a long-range, high-speed strategic nuclear bomber to replace the B-52. Four prototype aircraft were built. However, the project was cancelled in 1977 to a large degree because it was thought that the B-52 with air-launched cruise missiles could provide an equivalent capability at a lower cost.

The B-1A did not progress past the prototype stage.

#### B-1B

The B-1 project was revived in the 1980s. A total of 100 B-1Bs were acquired by the USAF, with modifications that gave lower radar cross-section and higher speed at low altitude at the cost of much reduced speed at high altitude, an improved defensive countermeasures suite, and a secondary conventional role. Although the B-1B is formally named the "Lancer," informally it is called the "Bone".

The B-1B entered service with the USAF in 1986, although full operability of its TFR and ECM systems took several years.

#### B-1R

The B-1R is a proposed modernization of the B-1B presented in 2004. It would have had more powerful Pratt & Whitney F119 engines, the air intakes reverted to a high-speed configuration (with a concomitant increase in radar cross-section), provision for weapons on the external stations, including AIM-120 AMRAAM AHMs for self-defense, a dual-mode radar able to combine air-to-air

and air-to-ground modes, and improved defensive countermeasures.

The B-1R did not progress beyond a conceptual proposal.

### Armament and Stores

#### B-1A

The B-1A is equipped with three internal bays. Each internal bay can carry a rotary launcher with either eight AGM-69A SRAM nuclear ASMs or eight B43 or B61 nuclear BBs or a 2,975 gal (11,200L) fuel tank.

Had it entered service, possible upgrades could have included the AGM-69B SRAM nuclear ASM and the B77 nuclear BB.

#### B-1B

The B-1B is equipped with three internal bays and eight external weapon stations on the fuselage and wing gloves. The six fuselage stations have higher capacity than the two wing-glove stations. Use of the external stations causes a significant increase in the radar cross-section.

Each internal bay can carry either a Multi-Purpose Rotary Launcher (MPRL), a Conventional Bomb Module (CBM), or a 2,975 gal (11,200L) fuel tank. Except for in the first few aircraft, the two forward bays can also be combined to carry a Common Strategic Rotary Launcher (CSRL) and a 1,500 gal (5,700L) fuel tank.

At its entry to service in 1986, the nuclear weapon options of the B-1B were eight B61/B63 nuclear BB or eight AGM-69A SRAM nuclear ASM in each MPRL. The SRAM was retired in 1990, the B-1B removed from the nuclear role in 1997, and the ability to carry nuclear weapons was disabled in 2011 to comply with the New START treaty.

The B-1B was tested for the internal carriage of eight AGM-86B ALCM or AGM-129A ACM nuclear ASMs in the CSRL and for the external carriage of fourteen ALCMs or ACMs on the external stations (two on each of the six fuselage stations and one on each of the two wing-glove stations). The vibration levels were too severe for the external carriage of the ALCM, but external carriage of the more robust ACM was feasible. Nevertheless, neither of these options became operational as the USAF deployed the ALCM and ACM exclusively on the B-52 in compliance with the (unratified) SALT II treaty.

In addition to cruise missiles, the fuselage external stations were designed to each carry six Mk 84 bombs or one 1,000 gal (3,800L) FTs, and the wing-glove stations were

designed to each carry four Mk 82 bombs, but these options were never deployed.

The conventional weapons load was initially restricted to twenty-eight Mk 82 500 lb bombs in a CBM. The Mk 82 bombs could be high-drag or low-drag, and the similar Mk 36 or Mk 62 mines could be used as well.

The conventional weapons options were expanded considerably during the aircraft's service with a series of upgrades:

- The 1996 upgrade allowed each CBM to carry ten CBU-87/89/97 cluster BBs.
- The 1998 upgrade allowed each MPRL to carry eight Mk 84 2,000 lb BBs or eight GBU-31 2,000 lb JDAM BSes, specifically the GBU-31(V)1/B with the standard Mk 84 2000 lb bomb as a warhead and the GBU-31(V)3/B with the BLU-109/B 2000 lb penetration bomb.
- The 2003 upgrade allowed the MPRL to carry eight AGM-154A JSOW BSes, but this weapon was not deployed operationally. It also allowed each CBM to carry ten CBU-103/104/105 wind-corrected cluster BBs or five GBU-38 JDAM BSes with a Mk 82 500 lb bomb as a warhead.
- The 2005 upgrade allowed each MPRL to carry eight AGM-158A JASSM ASMs. It also allowed each weapon bay to carry a different conventional weapon option. Prior to this, all weapon bays had to carry the same type of launcher and each launcher had to carry the same type of weapon.
- The 2008 upgrade recommissioned external station 1 for the AAQ-33 Sniper DP/LP and allowed the use of the laser-guided GBU-54 JDAM BS/BG in place of the GBU-38 BS.
- The 2014 upgrade allowed each MPRL to carry eight AGM-158B JASSM-ER ASMs.
- The 2018 upgrade allowed each MPRL to carry eight AGM-158C LRASM ASMs.
- The 2022 upgrade allowed each MPRL to carry a mixture of GBU-31 and GBU-38 JDAM BSes, with two GBU-38s replacing one GBU-31.

## **B-1R**

I have assumed that the internal weapon options for the B-1R are the same as for the B-1B. I have assumed the external weapon stations can each carry two AMRAAMs or any air-to-ground weapon that can be carried internally.

## **Combat**

The B-1B saw combat in 1998 in the Operation Desert Fox bombing campaign against Iraq, in 1999 in the Operation Allied Force armed intervention in Serbia and Kosovo, in the 2001-2021 War in Afghanistan, in the 2003 Invasion of Iraq, and in the 2011-2024 Syrian Civil War.

| 1. The Rockwell B-1A Lancer is a strategic nuclear bomber.                                                                                                                                                                                                              |  |       |  |           |                                                                                                                                                                                                                                                  |           |  |           |  |                                                                                                                                                                            |  |         |  |         | v2 0000000<br>0000-00-00T00:00:00 |     |  |  |  |                               |  |  |  |  |  |  |  |  |  |
| 2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry changes automatically at the end of each turn according to the speed. The data shown here are for the forward geometry and are used if the speed is 3.5 or less. |  |       |  |           |                                                                                                                                                                                                                                                  |           |  |           |  |                                                                                                                                                                            |  |         |  |         |                                   |     |  |  |  |                               |  |  |  |  |  |  |  |  |  |
| 3. High bleed rate (HBR). High transonic drag (HTD). Low roll rate (LRR). Poor supersonic maneuverability (PSSM). Rapid acceleration (RA).                                                                                                                              |  |       |  |           |                                                                                                                                                                                                                                                  |           |  |           |  |                                                                                                                                                                            |  |         |  |         |                                   |     |  |  |  |                               |  |  |  |  |  |  |  |  |  |
| 4. DDS capacity is 250 decoys.                                                                                                                                                                                                                                          |  |       |  |           |                                                                                                                                                                                                                                                  |           |  |           |  |                                                                                                                                                                            |  |         |  |         |                                   |     |  |  |  |                               |  |  |  |  |  |  |  |  |  |

| <b>Bomb System:</b> Advanced                                                                                                                         | <b>Notes:</b><br>1. The Rockwell B-1A Lancer is a strategic nuclear bomber.<br>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry changes automatically at the end of each turn according to the speed. The data shown here are for the mid geometry and are used if the speed is 4.0 to 5.0.<br>3. High bleed rate (HBR). Low roll rate (LRR). Poor supersonic maneuverability (PSSM). Rapid acceleration (RA).<br>4. DDS capacity is 250 decoys. | <b>Load Point Limits:</b> CL : 0–64<br>1/2: 65–88<br><b>Weight Limit:</b> 75,000 DT : 89+<br><table border="1"> <thead> <tr> <th>Station</th> <th>Limit</th> <th>Allowed Loads</th> </tr> </thead> <tbody> <tr> <td>1–3</td> <td>26,000</td> <td>RL FT</td> </tr> </tbody> </table> <b>Load Notes:</b><br>1. Stations 1-3 are internal bays and may each carry a rotary launcher with eight AGM-68A SRAM nuclear ASM or eight B43/B61 nuclear BB or an 11,200L FT (960 fuel points).<br>2. As an exception to the normal rules, internal stores and fuel contribute 1 load point for each 1,000 of weight or 50 fuel points. A return mission will typically require leaving the target with at least 3200 fuel points (64 load points). | Station | Limit | Allowed Loads | 1–3 | 26,000 | RL FT |

| Bomb System:     |  | Advanced         |  | <div>Notes:</div> <div>1. The Rockwell B-1A Lancer is a strategic nuclear bomber.</div> <div>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry changes automatically at the end of each turn according to the speed. The data shown here are for the aft geometry and are used if the speed is 5.5 or more.</div> <div>3. High bleed rate (HBR). Low roll rate (LRR). Low transonic drag (LTD). Poor supersonic maneuverability (PSSM). Rapid acceleration (RA).</div> <div>4. DDS capacity is 250 decoys.</div> |  |                    |  |                          | 1. Stations 1-3 are internal bays and may each carry a rotary launcher with eight AGM-68A SRAM nuclear ASM or eight B43/B61 nuclear BB or an 11,200L FT (960 fuel points). |  |           |  |  | 2. As an exception to the normal rules, internal stores and fuel contribute 1 load point for each 1,000 of weight or 50 fuel points. A return mission will typically require leaving the target with at least 3200 fuel points (64 load points). |  |

Stations 1-3 and 9-11 are the fuselage stations.</div><div>2. Stations 4 and 8 are the wing-glove stations.</div><div>3. Stations 5 to 7 are internal bays and may each carry a MPRL, CBM, or 11,200L FT (960 fuel points). Stations 5 and 6 may be combined to carry a CSRL and a 5,600L FT (480 fuel points).</div><div>4. See the extended notes for load options and restrictions for the MPRL, CBM, and CSRL.</div><div>5. Station 1 may carry an AAQ-33 Sniper DP/LP.</div><div>6. As an exception to the normal rules, internal stores and fuel contribute 1 load point for each 1,000 of weight or 50 fuel points. A return mission will typically require leaving the target with at least 3200 fuel points (64 load points).</div></div> |  |  |  |  |  |  |  |  |  |  |  |
| <div><div>Notes:</div><div>1. The Rockwell B-1B Lancer is a strategic nuclear and conventional bomber that also serves as a long-endurance close-support aircraft. Its nickname is “Bone”.</div><div>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry changes automatically at the end of each turn according to the speed. The data shown here are for the forward geometry and are used if the speed is 3.5 or less.</div><div>3. High bleed rate (HBR). High transonic drag (HTD). Low roll rate (LRR). Poor supersonic maneuverability (PSSM). Rapid acceleration (RA).</div><div>4. Tail Radar. Equipped with a ALQ-153 tail radar with ECCM 2, arc 60–, search 40-20, track 25-8, and lock-on 8–.</div><div>5. DDS capacity is 250 decoys.</div><div>6. DDS/DJM/AJM/BJM from 1991. TFR-B from 1992. Towed decoy technology from 1998.</div><div>7. Stealth technology is reduced to 1 if the OP/DP is carried and 0 if any other external store is carried.</div></div> |                                                                                                                          |                                                                                                       |                                                                                          | <div><div>VPs: 100/67/33/17</div></div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |  |  |  |  |  |  |  |  |

| <b>Notes:</b><br>1. The Rockwell B-1B Lancer is a strategic nuclear and conventional bomber that also serves as a long-endurance close-support aircraft. Its nickname is “Bone”.<br>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry changes automatically at the end of each turn according to the speed. The data shown here are for the mid geometry and are used if the speed is 4.0 to 5.0.<br>3. High bleed rate (HBR). Low roll rate (LRR). Poor supersonic maneuverability (PSSM). Rapid acceleration (RA).<br>4. Tail Radar. Equipped with a ALQ-153 tail radar with ECCM 2, arc 60–, search 40-20, track 25-8, and lock-on 8–.<br>5. DDS capacity is 250 decoys.<br>6. DDS/DJM/AJM/BJM from 1991. TFR-B from 1992. Towed decoy technology from 1998.<br>7. Stealth technology is reduced to 1 if the OP/DP is carried and 0 if any other external store is carried. |                  |                                                                               |     | <b>Load Notes:</b><br>1. Stations 1-3 and 9-11 are the fuselage stations.<br>2. Stations 4 and 8 are the wing-glove stations.<br>3. Stations 5 to 7 are internal bays and may each carry a MPRL, CBM, or 11,200L FT (960 fuel points). Stations 5 and 6 may be combined to carry a CSRL and a 5,600L FT (480 fuel points).<br>4. See the extended notes for load options and restrictions for the MPRL, CBM, and CSRL.<br>5. Station 1 may carry an AAQ-33 Sniper DP/LP.<br>6. As an exception to the normal rules, internal stores and fuel contribute 1 load point for each 1,000 of weight or 50 fuel points. A return mission will typically require leaving the target with at least 3200 fuel points (64 load points). |            |          |

Stations 4 and 8 are the wing-glove stations.                                                                                                                                                                                                                                                                                           |     |        |     |       |     |                     |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |           |           |                                                                                                                          |            | 3. Stations 5 to 7 are internal bays and may each carry any internal load allowed for the B-1B.                                                                                                                                                                                                                                            |     |        |     |       |     |                     |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |           |           |                                                                                                                          |            | 4. Stations 1-4 and 8-11 may carry any BB, BG, BG, or ASM weapon that can be carried internally or a MDR with two AIM-120 AHMs. Stations 1-3 and 9-11 may each carry two 2,000 lb weapons or six 500 lb weapons. Stations 4 and 8 may each carry one 2,000 lb weapon or four 500 lb weapons. Station 1 may carry an AAQ-33 Sniper OP/DP.   |     |        |     |       |     |                     |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |             |           |           |                                                                                                                          |            | 5. As an exception to the normal rules, internal stores and fuel contribute 1 load point for each 1,000 of weight or 50 fuel points. A return mission will typically require leaving the target with at least 3200 fuel points (64 load points).                                                                                           |     |        |     |       |     |                     |  |  |  |  |  |
| VPs: 110/73/37/18                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |             |           |           |                                                                                                                          |            | v2 0000000<br>0000-00-00T00:00:00                                                                                                                                                                                                                                                                                                          |     |        |     |       |     |                     |  |  |  |  |  |
