| Notes:<br>1. The Shenyang J-6 is a day fighter. It is licensed version of the MiG-19S. The NATO reporting name for the aircraft is Farmer-C.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |  |           |  |           |                     |           |  |       |  | 1. May use 760L FTs on stations 1 and 4.                                     |  |         |  |         |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                    |  |           |  |           |                     |           |  |       |  | 2. May use ORO-57K RPs or DRs each with two ORO-57K RPs on stations 2 and 3. |  |         |  |         |  |     |  |  |  |

| 1. The Shenyang F-6 is a day fighter. It is the export version of the Shenyang J-6 and a licensed version of the MiG-19S. The NATO reporting name for the aircraft is Farmer-C. |  |           |  |           |                     |           |  |       |  |                             |  |         |  |         | 1. May use 760L FTs on stations 1 and 4.                                     |     |  |  |  |  |  |  |  |  |
| 2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure.              |  |           |  |           |                     |           |  |       |  |                             |  |         |  |         | 2. May use ORO-57K RPs or DRs each with two ORO-57K RPs on stations 2 and 3. |     |  |  |  |  |  |  |  |  |

| 1. The Shenyang F-6 is a day fighter. It is the export version of the Shenyang J-6 and a licensed version of the MiG-19S. The “PAF” version is modified with two additional stations for AIM-9 IRMs, a ventral fuel tank, and an improved ejection seat. The NATO reporting name for the aircraft is Farmer-C.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |  |           |  |           |                                      |           |  |       |  | 1. May use AIM-9 IRMs on stations 1 and 7.                                                                                                                      |  |         |  |         |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |           |  |           |                                      |           |  |       |  | 2. May use 760L FTs on stations 2 and 6.                                                                                                                        |  |         |  |         |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |           |  |           |                                      |           |  |       |  | 3. May use SNEB 68 mm RPs on stations 3 and 5.                                                                                                                  |  |         |  |         |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |           |  |           |                                      |           |  |       |  | 4. May only use a special ventral conformal 750L FT on station 4. The fuel tank has a full weight of 1400, a load of 3.0/2.0, and a capacity of 65 fuel points. |  |         |  |         |  |     |  |  |  |

| 1. The Shenyang J-6A is an interceptor. It is derived from the MiG-19P. The NATO reporting name for the aircraft is Farmer-D and for the radar is Scan Odd.        |  |           |  |           |                                        |           |  |       |  | 1. May use 760L FTs on stations 1 and 4.                                     |  |         |  |         |  |     |  |  |  |
| 2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |  |           |  |           |                                        |           |  |       |  | 2. May use ORO-57K RPs or DRs each with two ORO-57K RPs on stations 2 and 3. |  |         |  |         |  |     |  |  |  |
|                                                                                                                                                                    |  |           |  |           |                                        |           |  |       |  | 3. | Notes:<br>1. The Shenyang J-6B is an interceptor. It is derived from the MiG-19PM. The NATO reporting name for the aircraft is Farmer-E and for the radar is Scan Odd.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |             |           |  |           |                                        |                    |  |            |  | 1. May use 760L FTs on stations 1 and 6. |  |            |  |           |  |     |

## **Chapter 5**

# **European Aircraft**

## Dassault/Dornier Alpha Jet

The Dassault/Dornier Alpha Jet is a two-seat advanced trainer and light attack aircraft. It was developed starting in 1967 and entered service in 1979.<sup>1</sup>

### Versions

#### Alpha Jet E

The Alpha Jet E is the trainer version, with the E designation taken from *École* (school). It is equipped with two underwing and one centerline weapon stations, but in French and Belgian service these were intended only for weapons training. Some of its later users employed it as a light strike aircraft, despite its shortcomings compared to aircraft dedicated to this role.<sup>2</sup>

It initially served in the French Armée de l'air and the Belgian Air Force, but later with the air forces of Egypt, Morocco, Nigeria, Qatar, Togo, Côte d'Ivoire, and with private companies.<sup>3</sup>

#### Alpha Jet A

The Alpha Jet A is the attack version, with the A designation taken from *Appui Tactique* (tactical support). Although very similar to the E, the A has two additional underwing weapon stations, a more advanced weapon system, and can replace the rear crew member with an ECM suite.<sup>4</sup>

It initially served in the German Luftwaffe, replacing the Fiat G91R/3. After the end of the Cold War many of these aircraft were sold to the air forces of Portugal and Thailand.<sup>5</sup>

### Armament and Stores

The Alpha Jet has no internal guns, but when armed would typically carry a gun pod on the centerline station, normally a CC420 30 mm DEFA pod for E models or a 27 mm Mauser pod for A models. The gun pod was originally not jettisonable, but this restriction was lifted by the 1989 upgrade of Luftwaffe Alpha Jet As.<sup>6</sup>

Typical stores would be SNEB 68 mm or CRV7 70 mm RPs or HE or cluster bombs.<sup>7</sup>

### Combat

The Alpha Jet A does not seem to have seen combat, but the Alpha Jet E has in Moroccan and Nigerian service, in the former case against Polisario Front in the Western Sahara War and in the latter against the Boko Haram militant group.

### ADCs

- Alpha Jet A
- Alpha Jet E

### 4. Alpha Jet A ADC. *Air Strike* has an ADC for the E. The ADC here is based on Chris Perleberg's update incorporating the changes in APJ 21.

### 5. Alpha Jet A Service. Wikipedia.

### 6. Gun Pods.

- For the A: Single Mauser 27 mm GP (Goebel) with 150 rounds (Wikipedia). The rate of fire is 1000-1700 RPM, which corresponds to 4.5 to 2.6 ammo points. An upgrade in 1989 which Luftwaffe As the ability to jettison the gun pod (Wikipedia).
- For the E: Single DEFA 30 mm GP (Goebel) with 150 rounds (Wikipedia). The model is the DEFA 553 (Wikipedia on DEFA). The rate of fire is 1300 RPM, which corresponds to 3.5 ammo. It may have been a CC420 gun pod (Wikipedia on gun pods).

### 7. Stores.

Stores include Matra 18 × 68 mm or CRV7 19 × 70 mm RPs, AIM-9s, Matra Magics, and Mavericks, bombs including the BL755 cluster bomb (Wikipedia). However, the Maverick capability seems to not have been implemented.

Could carry FTs with capacities of 310L (82 US gal) or 450L (119 US gal) (Goebel).

The ICE upgrade to the A was to provide compatibility with Mavericks, but this was cancelled in 1988 and a more austere upgrade from 1989 gave the AIM-9Ls and the ability to jettison the gun pod (Wikipedia).

Goebel states: "The French qualified a film-camera pod".

## SNCASE Mistral

The SNCASE (Société nationale des constructions aéronautiques du Sud-Est) SE.535 Mistral was a day fighter and fighter-bomber. It was named for the strong wind that occurred frequently in Provence.

### Versions

#### SE 535 Mistral

The SE 535 Mistral was a development of the Vampire FB.5 (previously license-built by SNCASE), but fitted with the more powerful Nene 104B motor (license-built by Hispano-Suiza) providing 5,000 lb of thrust compared to 3,000 lb for the Goblin 2 engine of the FB.5 and 3,500 lb for the Goblin 3 engine of the FB.6.

The Nene engine had been trialed in the Vampire F.2 with its need for greater airflow satisfied by additional “elephant ears” inlets on the upper side of the fuselage behind the cockpit. However, these intakes caused handling problems close to the critical Mach number. In the Vampire F.30, this was mitigated by moving the additional intakes to the underside of the fuselage. In contrast, the Mistral omitted them completely and instead opted for redesigned and enlarged wing-root inlets, and as a consequence had much more benign characteristics at high speed.

The Mistral also featured an ejection seat and air conditioning to facilitate its use in the French colonies in Africa.

It was not clear how much de Havilland was involved in the development of the Mistral, but nevertheless early prototypes of the Mistral were sometimes referred to as the Vampire FB.53.

The Mistral served in the French AA from 1953 until at least 1961.

### Armament and Stores

Its gun armament was four 20 mm Hispano cannons with 150 rounds, as in the Vampire. Air-to-ground ordnance included rockets, HE bombs, and napalm bombs.

### Combat

The Mistral saw combat with the French AA in the colonial wars in Tunisia and Algeria.

## Dassault Ouragan

The Dassault Ouragan was a fighter-bomber and the first French-designed jet-powered combat aircraft enter service. Like many of its contemporaries, it had a single engine, an air-intake in the nose, swept wings and tail, and wing-tip fuel tanks. Its name means “hurricane” in French.

### Versions

#### MD 450A and MD 450B

The initial 450A version used a non-afterburning Rolls-Royce Nene 102 engine. The subsequent 450A version used a similar Rolls-Royce Nene 104 engine license-built by Hispano-Suiza and had a revised undercarriage. However, the MD 450B was otherwise almost identical to the MD 450A.

The Ouragan entered service with the Armée de l’Air in 1952, replacing Vampires and other older aircraft. Its service life was short, and in 1955 it was replaced by the Mystère IV.

The Ouragan also served with the Indian Air Force from 1953 and was known as the Toofani (“hurricane” in Hindi). It was withdrawn from front-line services in 1965.

It also served with the Israeli Air Force from 1953 and served until the 1970s. In 1975, several were sold on to El Salvador, where they served until the late 1980s.

### Armament and Stores

The principal armament was four 20 mm Hispano-Suiza cannons under the nose. Two 450L fuel tanks would often be carried for extended range. For air-to-ground missions, the Ouragan could also carry bombs, napalm tanks,

105 mm Brand T-10 rockets, and SNEB 68 mm rocket pods.

### Combat

The Ouragan saw combat with the Israeli Air Force in the Suez Crisis and the 1967 War. In Indian service, it saw combat in the 1962 China-India War and the 1965 India-Pakistan War.

## Dassault Mystère IV

The Mystère IV was a fighter-bomber. It resembled the earlier Mystère aircraft, but was a new design adapted for supersonic flight. It featured an air-intake in the nose, a single engine, and sharply swept wings and tail.

### Versions

#### MD 454A

The MD 454A or Mystère IVA model was the only version to reach production. It featured a non-afterburning Rolls-Royce Tay engine (supplied by Rolls-Royce themselves or built under license by Hispano-Suiza) and two 30 mm DEFA cannons under the nose. It could reach supersonic speeds only in a dive.

The Mystère IVA entered service with the Armée de l'air in 1955 and served first as an interceptor and then as a fighter-bomber. It also served with the Israeli Air Force from 1956 to 1971 and with Indian Air Force from 1957 to 1973.

### Armament and Stores

The principal armament of the Mystère IVA was two 30 mm DEFA cannons under the nose. Two 450L fuel tanks would often be carried for extended range. For air-to-ground missions, the Mystère IVA could also carry bombs, napalm tanks, 105 mm Brand T-10 rockets, and SNEB 68 mm rocket pods.

### Combat

Israeli Mystère IVAs saw combat in the 1956 and 1967 Arab-Israeli Wars. French aircraft also fought in the 1956 Suez Crisis. Indian aircraft fought in the 1965 and 1971 India-Pakistan Wars.

## Dassault Mirage III

The Dassault Mirage III is a supersonic interceptor and multirole aircraft.<sup>1</sup>

### Versions

#### Mirage IIIE

The IIIE has an improved Cyrano-II radar, an extended fuselage to give room for more fuel and improved avionics including a RWR, and a slightly more powerful Atar 09C-3 engine.<sup>2</sup>

The IIIE first flew in 1961 and entered service with the French Armée de l'aire in 1964.<sup>3</sup>

#### Mirage IIIEA

The IIIEA is a version for the IIIE for the Argentinian FAA.<sup>4</sup>

The IIIEA saw combat in the South Atlantic War.<sup>5</sup>

### Armament and Stores

The gun armament is two 30 mm DEFA cannons each with 125 rounds.<sup>6</sup>

For air-to-air missions, the central station can carry an R.530 RHM or IRM, and the two outer wing stations can carry R.550 Magic IRMs.

To increase endurance, 500L, 900L, 1100L, 1300L, or 1700L fuel tanks could be carried, although only the 500L and 900L tanks could be carried at supersonic speeds. Not all tanks were available to all users. The original French 500L tanks were fixed, but jettisonable versions were later developed by Israel.<sup>7</sup>

### Combat

Argentine FAA Mirage IIIEAs saw combat in the 1982 South Atlantic War.

### ADCs

- Mirage IIIEA

### 2. IIIEA ADC. The ADC is based on those in *Air Power Journal* 20 and 44.

**RWR.** Goebel states the E gained an RWR. I assume RWR-A.

**Station Limits.** The station limits on the earlier ADCs need revision. The Mirage III can carry the TK-500 MRT, JL-100/JL-500 RPTs, of 1700L FTs on the inner-wing station and 1300L FTs on the centerline station (Kettle and Reid). In *Air Strike*, the TK-500 MRT has a weight of 1100 lb and can carry up to 2200 lb of bombs, for a total of 3300 lb, and the JL-100/JL-500 RPTs have a weight of 900/3000 lb. The 1300L FT from the IIIS weighs 2540 lb and the 1700L FT from the IIIS in *Air Power Journal* 39 weighs 3340 lb.

The ADC for the IIIE in *Air Power Journal* 20 has:

- centerline: 1800 lb
- inner wing: 3000 lb
- outer wing: 550 lb

The ADC for the IIIE in *Air Power Journal* 44 has:

- centerline: 2600 lb
- inner wing: 1850 lb
- outer wing: 370 lb

The ADC for the IIIS in *Air Power Journal* 39 has:

- centerline: 2550 lb
- inner wing: 260 lb (for Falcons)
- inner wing: 1230 lb but can be overloaded to 2540 lb for 1300L FT (limited to HT) or 3340 lb for 1700L FT (limited to TT).
- outer wing: 370 lb

Kettle has these limits for the IIIEA (and also for the Dagger):

- centerline: 1180 kg = 2600 lb
- inner wing: 840 kg = 1850 lb, but capable of carrying 1300L FT (2540 lb)
- outer wing: 168 kg = 370 lb

From these, I synthesize for the IIIC/E

- centerline: 2600 lb (able to carry the 1300L FT)
- inner wing: 1230 lb but can be overloaded to 2540 lb for the 1300L FT or TK-500 MRT (limited to HT) or 3400 lb for the 1700L FT or JL-500 RPT (limited to TT).
- outer wing: 370 lb

### 3. IIIE Service History and Combat. Wikipedia.

### 4. IIIEA ADC. The ADC is based on the IIIE with stores from Kettle. I assume it did not have the rocket motor.

### 5. IIIEA Service History and Combat. Wikipedia.

### 6. Guns. The internal guns are 30 mm DEFA 552A cannons with 125 rounds each (Wikipedia on Mirage III and DEFA). At 1,100–1,500 rounds per minute, this corresponds to 2.5–3.4 ammunition points. The ADCs give 3.0 ammunition points.

### 7. FTs. The ADC for the IIIE in *Air Power Journal* 44 lists:

- 500L FT (1025 lb, 2.0/1.5 load points, and 43 fuel points).
- 1300L FT (2450 lb, 4.0/2.5 load points, and 112 fuel points)
- 1700L FT (3195 lb, 7.0/4.0 load points, and 146 fuel points) FTs. It comments that the 500L cannot be jettisoned and the 1300L and 1700L limit the speed to subsonic. When carrying the 1300L and 1700L FTs on the inner-wing stations, the turn rates are limited to HT and TT, respectively.

The ADC for the IIIS in *Air Power Journal* 39 lists:

- 625L FT (1230 lb, 3.0/2.0 load points, and 52 fuel points).
- 1300L FT (2540 lb, 4.0/3.0 load points, and 108 fuel points). It can be carried on the inner-wing stations, but reduces the maximum turn rate to HT.
- 1700L FT (3340 lb, 5.0/3.5 load points, and 142 fuel points). It can be carried on the inner-wing stations, but reduces the maximum turn rate to TT.

Reid mentions the following French tanks for South African Mirage IIICZ. I assume they were also available for French IIIEs:

- 500L fixed/supersonic for stations 2 and 4.
- 600L jettisonable/subsonic for stations 2, 3, and 4.
- 1300L jettisonable/subsonic for stations 2, 3, and 4.
- 1700L jettisonable/subsonic for stations 2 and 4.

## Dassault Mirage 5

The Dassault Mirage 5 (sometimes written as Mirage V) is a day fighter and strike aircraft. It first flew in 1967. Dassault developed it at the suggestion of the Israeli IAF, and to a large degree is a Mirage IIIE with the search radar and other all-weather avionics removed and with additional fuel and an additional pair of weapon stations. In some later versions, more compact electronics allowed all-weather capabilities to be restored.<sup>1</sup>

### Versions

#### Mirage 5F

The Mirage 5F is the original version.<sup>2</sup>

These aircraft were originally built for Israel as the 5J. However, their delivery to Israel was blocked by the 1967 embargo, and they eventually entered service with the French Armée de l'air as the 5F and entered service around 1970.<sup>3</sup>

#### Mirage 5BA

The 5BA is a strike version for the Belgian Air Force. Changes included US avionics.<sup>4</sup>

The 5BA entered service in 1970, replacing F-84F Thunderstreaks, and was retired in 1993.<sup>5</sup>

#### Mirage 5BD

The 5BD is a two-seat trainer version for the Belgian Air Force, but it retains combat capability albeit without guns, like all two-seat versions of the Mirage 5.<sup>6</sup>

The 5BD entered service in 1970 and was retired in 1993.<sup>7</sup>

#### Mirage 5BR

The 5BR is a single-seat photoreconnaissance aircraft for the Belgian Air Force. It retains full combat capability.<sup>8</sup>

The 5BR entered service in 1970, replacing RF-84F Thunderstreaks, and was retired in 1993.<sup>9</sup>

### Armament and Stores

The internal armament of the Mirage 5 is two 30 mm DEFA 552A cannons with 125 rounds each.<sup>10</sup>

The external weapon options are similar to the Mirage III, although RHMs are obviously not used on models without adequate radar.<sup>11</sup>

### 2. **Mirage 5 ADF.** The original ADC for the Mirage 5, presumably the 5F version, appeared in *Air Strike*. Perleberg also has a version 2 ADC.

The *Air Strike* errata sheet states that stations 3 and 5 can only carry BB.

APJ 21 adds: ECCM 0; a standard ejection seat; LTD; PSSM; and allows the inner wing stations to be overloaded to 3000 lb.

Perleberg's ADC allows the inner wing stations to be overloaded to 3300 lb with FT/RPT/MRT.

The aircraft is limited to altitude 35 or less when DT, but the original *Air Strike* ADC has speed and climb data for the VH band (36–45) when DT. Perleberg removes this, and I follow him.

The Mirage IIIE has the Cyrano-II search radar. When this was removed to create the Mirage 5, the simpler tracking/ranging AIDA-II radar used previously by the Étendard IV seems to have been installed.

Jean-Baptiste Mouillet has commented that the 5F had no RWR and should have a manual bomb sight. However, the AIDA-II is noted as supplying both air-to-air and air-to-ground ranging, so I suspect a ballistic sight is more appropriate.

3. **Mirage 5F Service History.** The service history of the 5F is from Wikipedia.
4. **Mirage 5BA ADC.** The ADC for the 5BA is essentially that of the 5F, with some modifications to stores described below.
5. **Mirage 5BA Service History.** The service history of the 5BA is from the Mirage 5 Pilots Association and Wikipedia.
6. **Mirage 5BD ADC.** The ADC for the 5BD is essentially that of the 5BA, with the second crew added and the guns deleted. The Mirage IIIB lost its guns (Goebel), and I presume the 5BD did too.
7. **Mirage 5BD Service History.** The service history of the 5BD is from the Mirage 5 Pilots Association.
8. **Mirage 5BR ADC.** The ADC for the 5BR is essentially that of the 5BA with the addition of the camera nose. The Mirage IIIR retained its guns (Goebel), and I assume the 5BR did too. I assume the loss of the guns allows the aircraft to retain the same fuel capacity as the original 5BA.
9. **Mirage 5BR Service History.** The service history of the 5BR is from the Mirage 5 Pilots Association.
10. **Guns.** The internal guns are 30 mm DEFA 552A cannons with 125 rounds each (Wikipedia on Mirage V and DEFA). At 1,100–1,500 rounds per minute, this corresponds to 2.5–3.4 ammunition points. The ADCs give 3.0 ammunition points.

11. **Stores.** In the original *Air Strike* ADC, stations 1 to 5 are the same as on the Mirage III and stations 6 and 7 are under the rear fuselage. I have renumbered them conventionally from right to left.

**AAM.** The *Air Strike* ADC states that it can use Matra R.530 RHMs on the centerline station, but I suspect this is only the air superiority variant with Agave radar. I suspect the 5F and others with the AIDA-II radar can only use IRMs. I have modified the ADC to reflect this.

Belgian 5BA/5BD/5BR used Sidewinders (Mirage V Pilots Association). Belgium was not a user of the Matra R.530 or R.550 (Wikipedia on the R.530 and R.550).

**RPT/MTR.** The JL100 RPT can carry 268L of fuel and 18 × 68 mm rockets. The TK500 MRT can carry 500L of fuel and 5 × 500 lb BB.

**BS.** The original ADC of the 5F mentions BSes. Pakistani 5PA ROSE versions can carry the H-4 SOW BS. I can find no evidence that BSes were carried by others.

**RG.** The original ADC of the 5F mentions RGs. I presume these refer to the AS.30/AS.30L RGs. The AS.30 was carried by Peruvian 5Ps (Wikipedia on AS.30), but can find no evidence that it was carried by others. I can also find no evidence that the AS.30L was carried by 5Fs or others.

**RS.** The original ADC of the 5F mentions RSs. It is possible that Pakistani PAF Mirage 5Rs carry the Haft-VIII Ra'ad and Ra'ad-II cruise missile, which Pipes classifies as RS rather than ASM, but this did not exist when the original ADC was created. I do not know what this could refer to; perhaps the AJ-168 Martel?

**RK.** The original ADC of the 5F mentions RKs. I can find no evidence that the 5 carried RKs.

**ASM.** The original ADC of the 5F mentions ASMs. This may refer to the Pakistani 5PA3 which can carry the AM39 Exocet. I can find no evidence that other versions carried ASMs.

**ARM.** The original ADC of the 5F mentions AS.37 ARMs. France was a user of the AS.37 Martel ARM (Wikipedia on the Martel), but I can find no evidence that the 5F carried it. Belgium was not a user of the AS.37 (Wikipedia on the Martel), so the 5BA/5BD/5BR most certainly did not.

## **Chapter 7**

# **Italian Aircraft**

## Aermacchi MB-326

The Aermacchi MB-326 was designed as a trainer but then developed into a light attack aircraft. It featured tandem seating, a single Viper 11 turbojet engine, a low wing with wing-tip fuel tanks, and excellent performance for an aircraft of its class and era.

### Versions

#### MB-326

The initial MB-326 trainer (with no letter suffix) entered service with the Italian AMI in 1962. It had no provision for armament.

#### MB-326B/E/F/H

The MB-326B/E/F/H were the first combined trainer and light attack versions. They were largely similar and all featured the 2,500 lbf Viper 11 engine. They were equipped with six under-wing weapon stations for up to 2000 lb of stores, including gun pods, bombs, and rocket pods. Versions after the B could also carry under-wing fuel tanks.

The B was delivered to the Tunisian air force in 1965, the E to the Italian AMI for weapons training in 1968, the F to the Ghanaian air force in 1965, and the H to the Australian RAAF and RAN starting in 1967.

The H was also manufactured in Australia by the Commonwealth Aircraft Corporation (CAC) as the CA-30. It served in the Australian RAAF and RAN from 1967 to 2001 and was known informally as the "Macchi". It replaced the Vampire T.33A, T.34A, and T.35 trainers.

#### MB-326G

The later MB-326G light attack version featured a more powerful 3,410 lbf Viper 20-540 engine and a strengthened wing, which gave better performance in general and allowed up to 4000 lb of stores to be carried.

The GB version was delivered to the Argentine COAN starting in 1969 and served until sometime after the 1982 South Atlantic War, when it became impossible to maintain because of the UK embargo of spares for the Viper engine.

The GB also was delivered to the Zairean air force in 1969 and the Zambian air force in 1971.

The GC version was delivered to the Brazilian air force starting in 1971. It was also manufactured under license by Embraer as the EMB-326. In Brazilian FAB service, the GC was known as the AT-26 or RT-26 Xavante and served from 1971 to 2010. A number of Brazilian GCs were transferred to the Argentine Navy after 1982 to replace losses in the South Atlantic War.

#### MB-326K and Impala Mk II

The MB-326K was a dedicated light attack aircraft and dispensed with the second crew member. It had two internal 30 mm DEFA cannon mounted in the fuselage, an armored, single-seat cockpit, an uprated 4,000 lbf Viper 632-43 engine, six stations for up to 4000 lb of stores, including gun pods, bombs, rocket pods, fuel tanks, a four-camera photo-reconnaissance pod, and R.550 Magic infrared-homing missiles.

The K was used by the South African SAAF starting sometime after 1971. It was also manufactured under license in South Africa from 1974 by the Atlas Aircraft Corporation, albeit with the earlier 3,140 lbf Viper 20-540 motor. Both variants of the K served in the SAAF as the Impala Mk.II. They later served in the Brazilian FAB from 2004 to 2009 as the AT-26A Xavante.

#### MB-326L

The MB-326L was a two-seater version of the K without the integrated guns.

It was used by the air forces of Ghana, Tunisia, the UAE, and Zaire from 1975. It was further developed into the MB-336.

#### MB-326M and Impala Mk I

Despite M coming after K and L in the alphabet, the M was delivered before both. It was largely similar to the G.

It was manufactured both by Aermacchi and under license in South Africa by the Atlas Aircraft Corporation.

Both versions served with the South African SAAF from 1966 as the Impala Mk I.

## Armament and Stores

The E/F/H could use 300L under-wing FTs, whereas the G/K/L/M could use slightly larger 330L FTs.

All versions from the B onwards could carry a variety of bombs, rocket pods, and gun pods.

In Argentine COAN service, the MB-326GB would typically mount two single .50 cal gun pods plus four LAU-10 RPs (each with four Zuni rockets), four LAU-32 RPs (each with seven 70 mm rockets), four Matra-122 RPs (each with seven 68 mm), four Mk 81 250 lb bombs, or two Mk 82 500 lb bombs.

In RAAF service, the MB-326H could mount two SUU-11A/A 7.62 mm gun pods with a rate of fire of 2000 rpm per pod and 200 rounds per pod (3 ammo). It could also carry eight 25 kg practice bombs or, presumably in an emergency situation, 250 lb or 500 lb bombs. To increase its range or endurance, it could use 300L fuel tanks.

In Brazilian FAB service, the air-to-ground options for the AT-26 Xavante (G and K) included 250 lb and 500 lb bombs, 7.62 mm gun pods, and rocket pods with seven, nineteen, or thirty-seven 70 mm rockets.

In the SAAF service, the Impala Mk I and II (M and K) were typically armed with up to six Matra F2 rocket pods (each with six 68 mm rockets) or with 120 or 250 kg (250 and 500 lb) bombs and sometimes also equipped with a photographic reconnaissance pod or 330L fuel tanks. Although the outer pylons were apparently wired for IRMs, there is no evidence that they were carried.

## Combat

In the SAAF service, the Impala Mk I and II saw combat in the South African Border War. They flew both daylight and nighttime *Maanskyn* (moonshine) missions.

Argentine CANA MB-326Gs were based on the mainland during the South Atlantic War and did not see combat.

| <b>Notes:</b><br>1. The Aermacchi MB-326G is light attack aircraft. Minor versions are the GB and GC. It is derived from the MB-326F, but has the more powerful Viper 20-540 engine in place of the Viper 11 and greater load capacity. In Brazilian service it was known as the AT-26 or RT-26 Xavante.<br>2. High transonic drag (HTD). |                                                                                      | <b>Load Notes:</b><br>1. May use 330L FTs.<br>2. PP may only be used on station 4.                                                                                                                                                                                                                                                                          |         |       |               |         |     |                   |         |       |                         |         |       |                         |

| Notes:<br>1. The Aermacchi MB-326K is a light attack aircraft. It is derived from the MB-326G, but dispenses with the second crew member, has two internal DEFA 30 mm cannon, a more powerful Viper 632-43 engine, and the ability to carry IRMs. In SAAF service it was known as the Impala Mk II.<br>2. High transonic drag (HTD). |  |           |  |           |                                      |           |  |       |  | 1. May use 330L FTs.                  |  |        |  |        |  |     |  |  |  |

| Notes:<br>1. The Aermacchi MB-326K is a light attack aircraft. It is derived from the MB-326G, but dispenses with the second crew member, has two internal DEFA 30 mm cannon, and the ability to carry IRMs. This variant has the older and less powerful Viper 20-540 engine. In SAAF service it was known as the Impala Mk II and in Brazilian service as the AT-26A Xavante.<br>2. ## Aermacchi MB-339

The Aermacchi MB-339 is a trainer and light-attack aircraft. It was developed from the MB-326.

### Versions

#### MB-339A

The MB-339A was developed from the MB-326K. It gained a new forward fuselage for two crew, with the rear one being elevated to give better visibility, a new tail, and deleted the internal guns. It kept the wing and the 4,000 lbf Viper 632-43 engine. The additional weight of the fuselage modifications reduced the stores capacity to 3,500 lb.

The MB-339A was used by the Italian AMI (one hundred and seven), the Argentine COAN (ten MB-339AA), the Ghanaian Air Force (four), the Malaysian RMAF (thirteen MB-339AN), the Peruvian Air Force (sixteen MB-339AP), and the Nigerian Air Force (twelve MB-339AN), and the UAE Air Force (seventeen).

#### MB-339C and MB-339CD

The MB-339C is largely similar to the A, but has updated flight controls and avionics, including a RWR. The CD version also has a

The MB-339C serves with the Italian AMI (thirty MB-339CD), the Eritrean Air Force (six MB-339CE), and the Malaysian RMAF (MB-339CM).

#### MB-339CB

The MB-339CB is largely similar to the C, but uses the more powerful 4,440 lbf Viper 680-43 engine.

The MB-339CB served with the RNZAF from 1991 to 2003 and then with the French AA from 2019 for DACT.

### Armament and Stores

The MB-339 can be armed with gun pods (including ones with a 30 mm DEFA cannon and .50 cal machine guns), rocket pods, bombs, and is wired for AIM-9 Sidewinder and Matra R.550 Magic IRMs. It can use 330L FTs.

In Argentine COAN service, it was typically armed with two gun pods each with a 30 mm DEFA cannon and 120 rounds per gun and then either two LAU-10 RP (each with four Zuni rockets), two Matra-155 RPs (each with twelve 68 mm rockets), or two Mk 81 or Mk 82 BBs. The LAU-10 RPs were favored in the South Atlantic War.

### Combat

Argentine COAN MB-339As saw combat in the 1982 South Atlantic War, flying out of BAM Malvinas (Port Stanley Airport). They were used for armed reconnaissance and close air support. Of the seven deployed to the Islands, one crashed in poor weather, one was shot down by a Blowpipe, two were destroyed on the ground by naval gunfire, one was unable to escape, and two escaped back to the mainland.

Eritrean MB-339Cs saw combat in the 1998-2000 Eritrean–Ethiopian War.

## **Chapter 8**

# **Soviet Aircraft**

## Tupolev Tu-2

The Tupolev Tu-2 was a propeller-driven medium bomber that served in WW2 and after. Its NATO reporting name is Bat.

### Versions

#### Tu-2

The Tu-2 was the initial version and entered service in small numbers with the Soviet VVS in 1942. Although well regarded, production was suspended in favor of fighters and the Pe-2 light bomber.

#### Tu-2S

In 1943, production restarted of the improved Tu-2S version. This version had improved and more powerful ASh-82FNs engines, a four-bladed propeller in place of the earlier three-bladed one, changes to the structure and systems, including elimination of the dive brakes to simplify production and improve robustness, removal of the fixed forward machine guns, and improved defensive armament in the form of three single 12.7 mm UBT machine guns.

The Tu-2S served in the VVS from early 1944 until 1955. It also served with the Bulgarian Air Force, Chinese PLAAF, Hungarian Air Force, North Korean KPAF, Polish Air Force and Navy, and Romanian Air Force. Indonesia later received a few ex-Chinese Tu-2S aircraft.

#### Tu-2P

The PLAAF developed the Tu-2P to intercept overflights by ROCAF aircraft. The RP-1 radar from the J-5A (MiG-17PF) was installed in the nose, and two 23 mm NR-23 cannons replaced the 20 mm cannons in the wings. Defensive armament was deleted. The radar was modified to eliminate the lower part of the scan, which reduced

ground clutter at the cost of only being able to detect and track targets at the same or higher altitude.

Several PLAAF aircraft were converted in 1959.

### Armament and Stores

The Tu-2S was armed with two fixed 20mm ShVAK cannons in the wing roots and three 12.7mm UBT defensive guns in single mounts operated by the navigator, the radio operator, and the ventral gunner. In the Tu-2P, the fixed guns were replaced by a pair of 23mm NR-23 cannons, and the defensive guns presumably removed.

A typical bomb load for the Tu-2S would be three 1,000 kg bombs (one carried internally and one under each wing), four 250 kg bombs (two carried internally and one under each wing), or nine 100 kg bombs (all carried internally).

### Combat

The Tu-2S saw combat in WW2, with Chinese communist forces in the Chinese Civil War, with the PLAAF and KPAF in the Korean War, and with the PLAAF in the 1959 Tibetan Uprising and associated conflicts before and after.

The Tu-2P saw combat in November 1960 when three PLAAF aircraft attempted to intercept a ROCAF P2V. Two of the three flew into terrain, and the P2V escaped.

| Notes:<br>1. The Tupolev Tu-2S is a light bomber. The NATO reporting name is Bat.<br>2. Low roll rate (LRR).<br>3. Articulated Guns. In addition to its fixed guns, the Tu-2 is equipped with three 12.7 mm UBT machine guns in rear-facing single mounts that are operated by the navigator, radio operator, and ventral gunner. The guns can fire into the 60– arc. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 3/2/2 and the only modifiers are target size. The AtA damage rating is 2. The ammunition is 8.0. |  |           |  |           | 1. Stations 1 and 3 are under-wing stations. Load options for each are: (a) one 2,200 lb bombs or (b) one 550 lb bombs.                                                                                                                                                                                |           |  |       |  |                                                                          |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |           |  |           | 2. Station 2 is the internal bomb bay. Load options are: (a) one 2,200 lb bombs, (b) two 550 lb bombs, or (c) nine 220 lb bombs. Any bombs carried must be low-drag.                                                                                                                                   |           |  |       |  |                                                                          |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |           |  |           | 3. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 65 fuel points (1.3 load points). |           |  |       |  |                                                                          |  |        |  |        |  |     |  |  |  |

| Notes:<br>1. The Tupolev Tu-2P is a night interceptor. A few Tu-2S were converted by the PLAAF by adding the radar from the J-5A (MiG-17PF) and replacing the 20 mm cannons with 23 mm NR-23 cannons. The NATO reporting name is Bat.<br>2. Low roll rate (LRR).<br>3. Modified Radar Scan. In level flight, the radar may detect and track targets at equal or higher altitude, regardless of the altitude of the target, but may not detect targets at lower altitude. In diving or climbing flight, it may only detect targets at higher altitude.<br>4. Gun Muzzle Flash. If the guns are fired at night, for the rest of the current game turn and during the following two game turns, the aircraft may not sight, may not conduct any attack that requires the target to be sighted, and is considered to be flying in adverse weather conditions. |  |           |  |           | 1. Stations 1 and 3 are under-wing stations. Load options for each are: (a) one 2,200 lb bombs or (b) one 550 lb bombs.                                                                                                                                                                                |           |  |       |  |                                                            |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |           |  |           | 2. Station 2 is the internal bomb bay. Load options are: (a) one 2,200 lb bombs, (b) two 550 lb bombs, or (c) nine 220 lb bombs. Any bombs carried must be low-drag.                                                                                                                                   |           |  |       |  |                                                            |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |           |  |           | 3. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 65 fuel points (1.3 load points). |           |  |       |  |                                                            |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |           |  |           |                                                                                                                                                                                                                                                                                                        |           |  |       |  |                                                            |  |        |  |        |  |     |  |  |  |

| VPs: 12/8/4/2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |           |  |           |                                                                                                                                                                                                                                                                                                        |           |  |       |  | v2 0000000<br>0000-00-00T00:00:00                          |  |        |  |        |  |     |  |  |  |

## Yakovlev Yak-9

The Yakovlev Yak-9 was a propeller-driven fighter developed during WWII and which first entered service in 1942. After WWII, later versions were supplied to many Soviet allies. The NATO reporting name for the aircraft is “Frank.”

### Versions

There were many versions of the Yak-9; these are the most relevant.

#### Yak-9

The first Yak-9 version was developed from the Yak-7B fighter. It was armed with one 20 mm ShVAK cannon firing through the spinner and one 12.7 mm UBS machine gun in the left wing. It entered service with the Soviet VVS in 1942.

#### Yak-9T

The Yak-9T was armed with a 37 mm NS-37 cannon in place of the 20 mm. The cockpit was moved backwards slightly to accommodate the cannon.

#### Yak-9D

The Yak-9D is a long-ranged escort fighter derived from the original Yak-9. It had additional fuel tanks in the wings, but otherwise was very similar.

#### Yak-9M and Yak-9U

The Yak-9M was also derived from the original Yak-9, but had the cockpit move backwards like the Yak-9T for commonality and a stronger construction, with the fuselage being skinned by plywood rather than fabric. It added a second 12.7 mm UBS machine gun in the right wing. The

Yak-9U was an iteration of the Yak-9M with modifications to reduce defects during construction.

The Yak-9M entered service in the spring of 1944 and the Yak-9U followed before the end of WW2.

#### Yak-9P

The Yak-9P was a post-war development of the Yak-9U with completely metal wings.

The Yak-9U entered service with the VVS in 1946. It also served with many Soviet allies, including the Albanian Air Force, Bulgarian Air Force, Chinese PLAFAF, Hungarian Air Force, North Korean KPAF (from 1949), Polish Air Force and Polish Navy, and the Yugoslav Air Force.

### Armament and Stores

Most versions of the Yak-9 were armed with one 20 mm ShVAK cannon firing through the spinner and one or two 12.7 mm UBS machine guns in the wings.

Two 100 kg bombs could be carried under the wings.

### Combat

Early versions of the Yak-9 fought in WW2. The Yak-9U/-9P were also used by the North Korean KPAF and saw extensive service in the first weeks of the Korean War.

| 1. The Yakovlev Yak-9D is a propeller-driven, long-range day fighter. The NATO reporting name for aircraft is Frank.                                                                                                                                                                                                                                                                                                                             |       |           |     |                |             |           |                    |       |      |                             |      |                                   |      |     |      |     |     |     |     |   |     |     |     |     |   |     |     |     |     |      |   |   |   |   |                 |  |     |  |              |  |   |  |
| 2. High roll rate (HRR) if CL. High transonic drag (HTD). Low bleed rate (LBR).                                                                                                                                                                                                                                                                                                                                                                  |       |           |     |                |             |           |                    |       |      |                             |      |                                   |      |     |      |     |     |     |     |   |     |     |     |     |   |     |     |     |     |      |   |   |   |   |                 |  |     |  |              |  |   |  |
| 3. The normal fuel load is 35 fuel points. These guns may be overloaded to 55 fuel points, but doing so reduces power by 0.5 and increases vulnerability to −2 until the fuel drops to 35 fuel points.                                                                                                                                                                                                                                           |       |           |     |                |             |           |                    |       |      |                             |      |                                   |      |     |      |     |     |     |     |   |     |     |     |     |   |     |     |     |     |      |   |   |   |   |                 |  |     |  |              |  |   |  |

## Ilyushin Il-10

The Ilyushin Il-10 was a propeller-driven ground-attack aircraft developed during WWII as a replacement for the famous Il-2 Sturmovik.

### Versions

Like its predecessor, the Il-10 featured extensive armor for the crew and engine and a dorsal defensive gun to protect from attacks from the rear.

The initial Il-10 had two 23 mm VYa-23 cannons and two 7.62 mm ShKAS machine guns in the wings, with 150 and 750 rounds each, respectively, plus a 12.7 mm UBT machine gun with 150 rounds protecting the tail. Later versions had four 23 mm NR-23 cannons in the wings and a 20 mm B-20 cannon in the dorsal mount.

The Il-10 was also manufactured under license by Avia in Czechoslovakia.

The Il-10 entered service with the Soviet VVS in 1944 and was retired in 1956. After the war, it served with the Bulgarian Air Force, the Chinese PLAAF (from 1950 to 1972), the Czechoslovak Air Force, the Hungarian Air Force, the Indonesian Air Force (former Polish aircraft), the North Korean KPAF, the Polish Air Force, the Romanian Air Force, and the Yemen Air Force.

### Armament and Stores

In addition to its gun armament, a typical weapon load would be four 100 kg bombs, two in the bomb bays and two on the wing stations, or two 250 kg bombs on the wings. Alternatively, the wing stations could carry a total of eight RS-82 or four RS-132 rockets (although apparently these rockets were not used in the Korean War).

### Combat

The Il-10 was used by the North Korean KPAF and saw extensive service in the first weeks of the Korean War, before suffering large losses against USAF fighters. It was also used in combat by the PLAAF in 1955 during the First Taiwan Strait Crisis.

| Notes:<br>1. The Ilyushin Il-10 is a propeller-driven close-support aircraft. The NATO reporting name for the aircraft is Beast.<br>2. High transonic drag (HTD). Low bleed rate (LBR).<br>3. Articulated Gun. In addition to its fixed guns, the aircraft is equipped with one dorsal 12.7 mm UBT gun that can fire into the 60– arc. This gun may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 2/1/1 and are modified only by the target size. The AtA damage rating is 1. The ammunition is 5.0. |  |           |  |           | 1. Stations 1 and 4 could each be fitted with rails for four RS-82 or two RS-132 rockets, but these were not used in the Korean War. |           |  |       |  |                                   |  |        |  |        |  |     |  |  |  |

| Notes:<br>1. The Ilyushin Il-10 is a propeller-driven close-support aircraft. This late variant has an improved gun armament of four 23 mm NS-23 cannons in the wings and one defensive dorsal 20 mm B-20 cannon. The NATO reporting name for the aircraft is Beast.<br>2. High transonic drag (HTD). Low bleed rate (LBR).<br>3. Articulated Gun. In addition to its fixed guns, the aircraft is equipped with one dorsal 20 mm B-20 gun that can fire into the 60– arc. This gun may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 3/2/1 and are modified only by the target size. The AtA damage rating is 3. The ammunition is 6.0. |  |           |  |           | 1. Stations 1 and 4 could each be fitted with rails for four RS-82 or two RS-132 rockets, but these were not used in the Korean War. |           |                    |       |  |                                   |  |        |  |        |  |     |  |  |  |

## Tupolev Tu-4

The Tupolev Tu-4 was a propeller-driven strategic bomber. As it provided the Soviet Union for the first time with the ability to conduct a one-way strike on peripheral cities in the continental US, including Los Angeles and Chicago, it spurred the development and deployment of defensive interceptors and SAMs. This effort gained further urgency when the Soviet Union demonstrated its first nuclear bomb. The NATO reporting name for the Tu-4 is Bull.

### Versions

#### Tu-4

The Tu-4 was largely reverse-engineered from Boeing B-29As that had made emergency landings in the USSR during WWII and were subsequently interned. It was, however, fitted with Soviet Shvetsov ASh-73 engines and auxiliary equipment. Furthermore, the .50 cal machine guns on the original B-29A were replaced by more powerful 23 mm NS-23 cannons, with two in each turret and two in the tail position. The RPB Kobal't attack radar was a copy of the B-29's APQ-13 radar; its NATO reporting name is Mushroom.

The Tu-4 entered service with the Soviet DA VS (Long-Range Aviation) in large numbers in 1949. In addition to service in the DA VS, a small number were used by the Chinese PLAAF from 1953.

#### Tu-4A

The Tu-4A version was a nuclear bomber and the counterpart of the Silverplate and Saddletree variants of the B-29A. Armament and armor were sacrificed to give longer range.

The Tu-4A served only in the Soviet DA VS.

#### Tu-4P

The Tu-4P version was a conversion carried out by the Chinese PLAAF to create a night fighter specifically to counter

ROCAF intruders. The navigation radar was moved from its normal ventral position to a radome in place of the forward dorsal turret, creating a basic all-round air-search radar. The bomb bay was used as an air-intercept command post, and the guns were equipped with a basic infrared sight.

A few Tu-4P aircraft served with the PLAAF in 1960.

### Armament and Stores

A typical bomb load for the conventional Tu-4 would be six 1,000 kg bombs in the internal bays.

The nuclear Tu-4A could carry the RDS-1, -3, and -5 nuclear bombs.

### Combat

Only the Tu-4P saw combat.

| <div>Notes:</div> <div>1. The Tupolev Tu-4 is a propeller-driven strategic conventional bomber. It is a reverse-engineered version of the Boeing B-29A. The NATO reporting name for the aircraft is Bull.</div> <div>2. Low roll rate (LRR).</div> <div>3. Flight Restrictions. VD, VC, and unloading are forbidden.</div> <div>4. Articulated Guns. The guns can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size and a −1 modifier when firing into the 60– arc.</div> |     |             |     |             |  |                                                                                                                                                                 |    |                               |    |                                   |    |           |     |                          |     |           |     |     |     |     |   |     |     |     |     |   |     |     |     |     |      |   |   |   |   |  |  |  |  |  |  |  |  |  |  |

| <div>Notes:</div> <div>1. The Tupolev Tu-4 is a propeller-driven strategic nuclear bomber. It is a reverse-engineered version of the Boeing B-29A. The NATO reporting name for the aircraft is Bull.</div> <div>2. Low roll rate (LRR).</div> <div>3. Flight Restrictions. VD, VC, and unloading are forbidden.</div> <div>4. Articulated Guns. The guns can only fire at targets in the 60– arc. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size.</div> |             |           |           |                               |            |                                                                                                                |      |        |      |       |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |     |     |    |     |     |     |     |   |     |     |     |     |   |     |     |     |     |      |   |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |  |  |  |    |     |    |    |     |   |   |    |   |   |   |    |   |   |   |    |   |   |   |

| <div>Notes:</div> <div>1. The Tupolev Tu-4P is a propeller-driven night interceptor converted from the Tu-4 bomber. The NATO reporting name is Bull.</div> <div>2. Low roll rate (LRR).</div> <div>3. Flight Restrictions. VD, VC, and unloading are forbidden.</div> <div>4. Dorsal Radar. In level flight, the radar may detect targets at equal or higher altitude, regardless of the altitude of the target, but may not detect targets at lower altitude. In diving or climbing flight, it may only detect targets at higher altitude.</div> <div>5. Articulated Guns. The guns can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size and a −1 modifier when firing into the 60– arc.</div> |  |           |  |           |  |                                                                                                                                                                                                                        |  |       |  |                                               |                     |                                        |  |        |  | <div>1. No stores may be carried. The internal bomb bay is used to house an air-intercept control post.</div> |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |           |  |           |  |                                                                                                                                                                                                                        |  |       |  |                                               |                     |                                        |  |        |  |                                                                                                               |  |  |  |  |  |  |  |  |  |

## Mikoyan-Gurevich MiG-15

The Mikoyan-Gurevich MiG-15 was an early jet interceptor and day fighter. The MiG-15 was one of the first fighters to incorporate a swept wing and a swept tail to reduce the effects of compressibility and allow higher transonic speeds. However, it used conventional elevators rather than an all-flying tail, and so became difficult to control at high speeds. The NATO reporting name for the aircraft is “Fagot.”

### Versions

#### MiG-15

The initial MiG-15 was powered by the 5,000 lbf Klimov RD-45, an unauthorized copy of the Rolls-Royce Nene engine (which had been sold to the Soviet Union in small numbers with the agreement of the British Government). As it was initially intended to serve as an interceptor, it carried a very heavy gun armament of one 37 mm N-37 cannon with 40 rounds and two 23 mm NS-23 cannons with 80 rounds per gun, all under the nose. The NATO reporting name for the aircraft is “Fagot-A.”

The MiG-15 entered service with the Soviet VVS in 1949 and the PVO in 1950, but was rapidly replaced by the MiG-15bis.

#### MiG-15bis

The MiG-15bis was the main production version and was an improvement on the original MiG-15 in a number of small but important ways. The engine was upgraded to the 5,950 lbf Klimov VK-1, a development of the RD-45. The NS-23 cannons were replaced by faster-firing NR-23 cannons. The MiG-15 formed the basis for the development of the MiG-17. The NATO reporting name for the aircraft is “Fagot-B.”

The MiG-15bis entered service with the Soviet VVS and

PVO in 1950. It also served dozens of Soviet allies in the following years, notably the Chinese PLAAF and PLAN and the North Korean KPAF.

#### MiG-15UTI

The MiG-15UTI was a two-seat training aircraft, with reduced fuel and armament. The NATO reporting name is Midget.

The MiG-15bis entered service with the Soviet VVS and PVO in 1950. Like the MiG-15bis, it also served with dozens of Soviet allies in the following years.

#### MiG-15P

The MiG-15P was a prototype all-weather interceptor, equipped with the RP-1 Izumrud radar (NATO reporting name “Scan Fix”) and with its armament reduced to two 23 mm NR-23 cannons.

#### MiG-15ISH

The MiG-15ISH was a prototype attack version with pylons in the wings for bombs or rockets in addition to the stations for fuel tanks.

### Armament and Stores

To counter its short endurance, the MiG-15 could use 250, 300, 400, or 600 liter fuel tanks on its under-wing stations. The larger tanks reduced maneuverability. It could also be armed with rockets or bombs, but given this does not seem to be common.

### Combat

The MiG-15bis saw extensive combat, including in the Korean War with the VVS and PVO, the PLAAF, and the KPAF, and in clashes between the PLAAF and ROCAF, in the Suez Crisis with the EAF. They also performed many interceptions of aircraft during the Cold War.

When used as a fighter, it was limited by the slow rate of fire of its guns (400 rounds per minute for the N-37 and 800 for the NR-23), but a single hit on a fighter or fighter-bomber could often inflict fatal damage. As an interceptor in Korea, its combination of high speed and powerful armament allowed it to inflict heavy losses of USAF B-29 bombers engaged in daytime raids and effectively force them to operate under the cover of darkness.

## Ilyushin Il-28

The Ilyushin Il-28 was a conventional and nuclear tactical bomber and a long-range reconnaissance aircraft. The NATO reporting name for the aircraft is “Beagle”.

It was powered by two Klimov VK-1 engines in underwing pods. This engine was a development on the Klimov RD-45, an unauthorized copy of the Rolls-Royce Nene engine, and was also used in the MiG-15bis.

### Versions

#### Il-28

The Il-28 was a conventional tactical bomber. It was armed with two fixed 23 mm NR-23 cannons and two more in a defensive tail mount. It could carry up to 3,000 kg (6,600 lb) of bombs in its internal bomb bay, but a normal load was 1,000 kg (2,200 lb).

The Il-28 entered service with the Soviet VVS in 1950 and AV MF (Naval Aviation) in 1951 and with the PLAAF in 1952. They were exported to many other countries, including Afghanistan, Algeria, Bulgaria, Cambodia, Czechoslovakia, East Germany, Egypt, Finland, Hungary, Indonesia, Iraq, Morocco, Nigeria, North Korea, North Vietnam, Romania, Somalia, Syria, and Yemen. They were built under license in Czechoslovakia. China later built a modified version as the Harbin H-5.

#### Il-28T

The Il-28T was a torpedo bomber. Its bomb bay was lengthened to allow the internal carriage of torpedoes and its wing moved slightly to compensate for the resulting change in the center of gravity. It was equipped with two 350L wing-tip fuel tanks to compensate for the reduced capacity of the in fuselage fuel tanks.

The Il-28T entered service with the Soviet AV MF in 1951.

#### Il-28R

The Il-28R was a long-range photo-reconnaissance aircraft. Its bomb bay was given over to cameras, flares, and

additional fuel. It also was equipped with two 350L wing-tip fuel tanks. One of the forward-firing guns was replaced by reconnaissance equipment.

The Il-28R entered service with the VVS and AV MF in 1952.

#### Il-28N

The Il-28N was a nuclear tactical bomber. It could carry the RDS-4 nuclear bomb in its internal bomb bay. Like the Il-28R, it was equipped with two 350L wing-tip fuel tanks.

The Il-28N entered service with the VVS in about 1954.

#### Il-28REB

The Il-28REB was an electronic-countermeasures aircraft. Its primary role was to protect Il-28s on conventional and nuclear bombing missions. Like the Il-28R, it was equipped with two 350L wing-tip fuel tanks.

The Il-28REB entered service with the VVS in about 1954.

### Armament and Stores

The Il-28 could carry up to 3,000 kg (6,600 lb) of bombs in its internal bay. Alternatively, the Il-28T could carry one Type 45 or two RAT-52 torpedoes. The Il-28N could carry a single RDS-4 nuclear bomb.

### Combat

PLAAF Il-28s did not see combat in the Korean War, but were an implicit threat during the last year of the Korean War. They saw action in 1956 against Taiwan, bombing the Tachen Islands, and suffered losses to RoCAF F-84 and F-86s. They were also used in the 1959 Tibetan Uprising.

Egyptian Air Force Il-28s fought in the 1967 War, the War of Attrition, and the 1973 War.

Soviet VVS Il-28s saw combat in the Soviet-Afghan War.

Station 1 is the internal bomb bay. Load options are: (a) one FAB-3000 6,600 lb bomb, (b) one FAB-1000 2,200 lb bomb, (c) four FAB-500 1,100 lb bombs, (d) eight FAB-250 550 lb bombs, or (e) twelve FAB-100 225 lb bombs. All bombs carried must be low-drag. |  |               |
| Notes:<br>1. The Ilyushin Il-28 is a medium bomber. The NATO reporting name for the aircraft is Beagle.<br>2. High transonic drag (HTD). Low roll rate (LRR).<br>3. Bomb system is ballistic (–1) if doing level bombing from four or more altitude levels above the target.<br>4. Articulated Guns. In addition to its fixed guns, the aircraft has a tail mount with two 23 mm NR-23 guns that can fire into the 60– arc. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 3/2/1 and no modifiers apply except target size. The AtA damage rating is 4. The ammunition is 6.0.<br>5. The tail gunner does not have an ejection seat and can only bail out.<br>6. RWR from 1960. |  |                 |             |  | 2. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight. |                                                                                                                                                                                                                                                                   |  |               |

| <div>Notes:</div> <div>1. The Ilyushin IL-28R is a photo-reconnaissance aircraft. It is a development of the Il-28 medium bomber. The NATO reporting name for the aircraft is Beagle.</div> <div>2. High transonic drag (HTD). Low roll rate (LRR).</div> <div>3. Articulated Guns. In addition to its fixed guns, the aircraft has a tail mount with two 23 mm NR-23 guns that can fire into the 60– arc. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 3/2/1 and no modifiers apply except target size. The AtA damage rating is 4. The ammunition is 6.0.</div> <div>4. The tail gunner does not have an ejection seat and can only bail out.</div> <div>5. Overhead and left oblique cameras in the bomb bay</div> <div>6. Station 1 is the internal bomb bay. Load options are: (a) one FAB-3000 6,600 lb bomb, (b) one FAB-1000 2,200 lb bomb, (c) four FAB-500 1,100 lb bombs, (d) eight FAB-250 550 lb bombs, (e) twelve FAB-100 225 lb bombs, (f) naval mines, (g) one Type 45 torpedoes, or (h) two RAT-52 rocket torpedo. All bombs carried must be low-drag. |        |     |                                    |     |     |
| Notes:                 |             |           |           |           |                                                                                                                                                                                                                                                                                                  |                    | 2. Internal fuel includes two fixed 350L wing-tip fuel tanks. As an exception to the normal rules for load points, internal fuel above 565 fuel points contributes 1 load point for each 50 fuel points.                                                                                                                                     |        |     |                                    |     |     |

Station 1 is the internal bomb bay. It cannot be used to carry stores.                                                                                                                                |     |     |  |  |
| Notes:                 |             |           |           |           | 1. The Ilyushin Il-28REB is a electronic-countermeasures aircraft. It is a development of the Il-28 medium bomber. The NATO reporting name for the aircraft is Beagle.<br>2. High transonic drag (HTD). Low roll rate (LRR).<br>3. Articulated Guns. In addition to its fixed guns, the aircraft has a tail mount with two 23 mm NR-23 guns that can fire into the 60– arc. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 3/2/1 and no modifiers apply except target size. The AtA damage rating is 4. The ammunition is 6.0.<br>4. The tail gunner does not have an ejection seat and can only bail out. |       |     |                    |     | 2. Internal fuel includes two fixed 350L wing-tip fuel tanks. As an exception to the normal rules for load points, internal fuel above 565 fuel points contributes 1 load point for each 50 fuel points. |     |     |  |  |

## Tupolev Tu-14

The Tupolev Tu-14 was a conventional medium bomber and torpedo bomber. Its NATO reporting name is Bosun.

### Versions

#### Tu-14

The Tu-14 was a conventional tactical bomber. It was developed in competition with the Ilyushin Il-28 and shares many features with that aircraft, including unswept wings, a swept tail, two Klimov VK-1 engines in pods under the wings, and a gun armament of two fixed 23 mm NR-23 guns and two more in a tail turret. It could carry 3,000 kg (6,600 lb) in its internal bomb bay.

However, the Tu-14 was not accepted for service by the VVS, which preferred the Il-28.

#### Tu-14T

The Tu-14T was a torpedo bomber, developed for Soviet AM VF. In contrast to the Tu-14 bomber version, the pilot and weapons officer are provided with ejection seats.

The Tu-14T served from 1952 to 1959 in Naval Aviation but did not serve in other branches and was not exported.

### Armament and Stores

The Tu-14T could carry torpedoes, mines, or bombs in its internal bomb bay.

### Combat

The Tu-14 did not see combat.

| 3. Bomb system is ballistic (-1) if doing level bombing from four or more altitude levels above the target.                                                                                                                                                                                                                                                        |       |           |     |           |                                       |           |                    |     |     |                                                                                                                                                                                                                                   |     |     |    |     |               |  |                                   |  |  |  |
| 4. Articulated Guns. In addition to its fixed guns, the aircraft has a tail mount with two 23 mm NR-23 guns that can fire into the 60- arc. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 3/2/1 and no modifiers apply except target size. The AtA damage rating is 4. The ammunition is 6.0. |       |           |     |           |                                       |           |                    |     |     |                                                                                                                                                                                                                                   |     |     |    |     |               |  |                                   |  |  |  |

| 3. Bomb system is ballistic (–1) if doing level bombing from four or more altitude levels above the target.                                                                                                                                                                                                                                                 |       |           |     |           |                 |                    |             |                |     |                                          |                                                                                                                                                                                                                                                                |     |     |    |     |                                   |  |
| 4. Tail Guns. In addition to its fixed guns, there aircraft has a tail mount with two 23 mm NR-23 guns that can fire into the 60– arc. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. The hit roll is 3/2/1 and no modifiers apply except target size. The AtA damage rating is 4. The ammunition is 6.0. |       |           |     |           |                 |                    |             |                |     |                                          |                                                                                                                                                                                                                                                                |     |     |    |     |                                   |  |
| 5. The tail gunner does not have an ejection seat and can only bail out.                                                                                                                                                                                                                                                                                    |       |           |     |           |                 |                    |             |                |     |                                          |                                                                                                                                                                                                                                                                |     |     |    |     |                                   |  |

## Mikoyan-Gurevich MiG-17

The Mikoyan-Gurevich MiG-17 was an early jet interceptor and day fighter, with limited capability as a fighter-bomber.

### Versions

#### MiG-17

The MiG-17 day fighter was based on the MiG-15bis, but had a thinner but stiffer wing and tail surfaces for better control at higher Mach number and a longer fuselage, but retained conventional elevators. It maintained the Klimov VK-1A non-afterburning engine and the heavy armament of the MiG-15bis. The NATO reporting name is Fresco-A.

The MiG-17 entered service with the Soviet VVS in 1952. It was subsequently widely exported to dozens of Soviet allies, including notably the Chinese PLAAF and PLAN, the North Korean KPAF (after the Korean War), the North Vietnamese VPAF, the Egyptian and Syrian Air Forces.

#### MiG-17F

The MiG-17F had a VK-1F afterburning engine but was otherwise almost identical to the MiG-17. The afterburner gave a dramatic improvement in climb rate, which was important in an interceptor. The MiG-17F was the first Soviet operational aircraft to be equipped with an afterburner. The NATO reporting name is Fresco-C.

The Polish PZL-Mielec Lim-5 and Chinese Shenyang J-5/F-5 were licensed versions of the MiG-17F.

The MiG-17F entered service with the Soviet VVS in 1953. Like the preceding MiG-17, it was subsequently widely exported to dozens of Soviet allies, including notably the Chinese PLAAF and PLAN, the North Korean KPAF (after the Korean War), the North Vietnamese VPAF, the Egyptian and Syrian Air Forces.

#### MiG-17P

The MiG-17P all-weather interceptor was derived from the original MiG-17 and the prototype MiG-15P. It had an RP-1 Izumrud (Scan Odd) radar mounted in front of the air intake and kept the non-afterburning engine. The NATO reporting name is Fresco-B.

The MiG-17P entered service with the Soviet PVO and AV MF in 1953.

#### MiG-17PF

The MiG-17PF all-weather interceptor was a development of the MiG-17P. It gained the VK-1F afterburning engine and had an armament of three NR-23 guns. The NATO reporting name is Fresco-D.

The Polish PZL-Mielec Lim-5P and Chinese Shenyang J-5A/F-5A were licensed versions of the MiG-17PF.

The MiG-17PF served with the Soviet PVO from 1953. It also served with the Bulgarian Air Force, the Chinese PLAAF (both as original versions and as J-5As), the Hungarian Air Force, and the Polish Air Force (from 1955).

#### MiG-17PFU

The MiG-17PFU all-weather interceptor was a further development of the MiG-17PF. The major change was the replacement of the gun armament with four Kalingrad K-5 (AA-1 Alkali) BRMs guided by the RP-2 Izumrud radar. The NATO reporting name was Fresco-E.

The MiG-17PFU served with the Soviet PVO from 1956.

### Armament and Stores

The primary air-to-air armament of the MiG-17 was its cannon. The K-13 (AA-2 Atoll) IRM became available in 1961, but it was not widely used as by then the MiG-17 was typically transitioning to a ground-attack role. The MiG-17PFU was armed with Kalingrad K-5 (AA-1 Alkali) BRMs.

To counter its short endurance, the MiG-17 could use 250, 300, 400, or 600 liter fuel tanks on its under-wing stations. The 600 liter tanks reduced maneuverability. It could also be armed with 250 kg bombs or, from 1955, with ORO-57 rocket pods each with eight 57 mm rockets.

### Combat

A number of US reconnaissance flights were shot down by PVO MiG-17P/PFs between 1953 and 1970.

Chinese PLAAF MiG-17s clashed with ROCAF F-86s in the Second Taiwan Strait Crisis in 1958. They also intercepted ROCAF reconnaissance flights over mainland China.

From 1965 to 1972, the MiG-17/17F saw combat with the VPAF in the Vietnam War, initially embarrassing much more modern adversaries with its small size, maneuverability, and cannon armament. The MiGs were largely used as interceptors, but in 1972 two attacked USS Higbee and USS Oklahoma City as they carried out a naval gunfire support mission.

During the 1967 War, the War of Attrition, and the 1973 War, Egyptian and Syrian MiG-17/17F aircraft served in a ground-attack role.

In the late 1960s and the 1970s, MiG-17/17Fs were widely used in ground-attack roles as governments in Africa and Asia countered insurgencies.

May use 250L, 300L, 400L, or 600L FTs. As an exception to the normal rules for load limits, 600L tanks can be carried, but the turn rate is limited to BT. |  |        |  |        |  |       |  |     |  |
| Notes:<br>1. The Mikoyan-Gurevich MiG-17 is an day fighter. It is a development of the MiG-15bis, with new wings and tail surfaces and a modified fuselage. It uses the non-afterburning VK-1A engine. The NATO reporting name for the aircraft is Fresco-A.<br>2. High transonic drag (HTD). Low roll rate (LRR) if speed ≥ 4.0. |  |       |  |           |                     |           |  |           |  | 2. From 1961, may use AA-2 IRMs.                                                                                                                              |  |        |  |        |  |       |  |     |  |

| 1. The Mikoyan-Gurevich MiG-17P is an interceptor. It is a development of the MiG-17 and uses the same non-afterburning VK-1A engine, but is equipped with the RP-1 Izumrud radar. The NATO reporting name for the aircraft is Fresco-B and for the radar is Scan Odd. |  |                                   |  |             |  |     |  |                                                                                                                                                               |  |  |  |          |  |                 |  |
| 2. High transonic drag (HTD). Low roll rate (LRR) if speed ≥ 4.0.                                                                                                                                                                                                      |  |                                   |  |             |  |     |  |                                                                                                                                                               |  |  |  |          |  |                 |  |

May use 250L, 300L, 400L, or 600L FTs. As an exception to the normal rules for load limits, 600L tanks can be carried, but the turn rate is limited to BT. |     |                    |     |            |  |           |  |     |
| Notes:                   |             |           |      | 1. The Mikoyan-Gurevich MiG-17PF is an interceptor. It is a development of the MiG-17P and uses the same afterburning VK-1F engine, but is equipped with the RP-1 Izumrud radar. The NATO reporting name for the aircraft is Fresco-D and for the radar is Scan Odd. |                                              |                    |                      | 2. From 1961, may use AA-2 IRMs.                                                                                                                              |     |                    |     |            |  |           |  |     |

## Tupolev Tu-16

The Tupolev Tu-16 is a conventional and nuclear strategic bomber. It has a swept wing and tail and two large Mikulin AM-3 engines in the wing roots. It is defended by six 23 mm AM-23 guns mounted in pairs in a tail turret, rear ventral turret, and forward dorsal turret, and also has a fixed forward-firing single 23 mm AM-23 gun.

The initial Tu-16 version is a conventional strategic bomber, and was the Soviet Union's first long-range jet bomber.

The Tu-16A is an adaptation of the Tu-16 for carrying nuclear weapons, including the Soviet Union's first hydrogen bomb, the RDS-37.

The Tu-16KS and Tu-16K were naval strike version, with improved search radar and the ability to carry KS-1 Komet (AS-1 Kennel) and KSR-2/KSR-11 (AS-5 Kelt) cruise missiles.

The Tu-16 entered service in 1954 with DA (Long-Range Aviation) and AVMF (Naval Aviation). The Tu-16A followed shortly thereafter. The Tu-16KS and Tu-16K entered service in 1954 and 1962 with AVMF.

The Tu-16 was exported to China (where it was also produced under license as the Xi'an H-6/B-6), Egypt, Indonesia, and Iraq.

Egyptian Tu-16s suffered heavy losses on the ground at the start of the 1967 War, but were more active in the 1973 War.

Iraqi Tu-16s saw combat in the Iran-Iraq War.

ADCs are provided for:

- Tu-16
- Tu-16A
- Tu-16KS
- Tu-16K

| Notes:<br>1. The Tupolev Tu-16 is a strategic conventional bomber. The NATO reporting name for the aircraft is Badger-A, and for the tail radar is Bee Hind.<br>2. DDS capacity is 60 CH and 20 FL or 80 CH.<br>3. Tail Radar. Equipped with a PRS-1 Argon tail radar that allows an attempt at RE radar ranging when firing at targets in the 30– arc. The lock-on roll is 7–.<br>4. Articulated Guns. In addition to its fixed guns, the aircraft has six 23 mm AM-23 guns, two in the forward dorsal twin turret, two in the rear ventral twin turret turret, and two in the tail turret. They can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 2/1/1 and are modified only by the target size, a –1 modifier when firing into the 60– arc, and possibly a –1 modifier for RE radar ranging with the tail radar. The AtA damage rating is 4. The ammunition is 10.0. |  |  |  |                 |  |  |  | Load Notes:<br>1. Station 1 is the internal bomb bay. Load options include (a) one FAB-9000 (20,000 lb) bomb, (b) six FAB-1000 2,200 lb bombs, (c) twelve FAB-500 1,100 lb bombs, or (d) sixteen FAB-250 550 lb bombs. All bombs must be the same type and low-drag.<br>2. In the late 1960s, some Tu-16s were modified to allow them to carry (a) nine FAB-1000 2,200 lb bombs, (b) eighteen FAB-500 1,100 lb bombs, or (c) twenty-four FAB-250 550 lb bombs. |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |                 |  |  |  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |

| 1. The Tupolev Tu-16KS is a maritime strike aircraft. It is derived from the Tu-16 conventional bomber. The NATO reporting name for the aircraft is Badger-B, and for the tail radar is Bee Hind.                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |             |  |  |  |                                                         |  |  |  |                                   |  |  |  |
| 2. DDS capacity is 60 CH and 20 FL or 80 CH.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |             |  |  |  |                                                         |  |  |  |                                   |  |  |  |
| 3. Tail Radar. Equipped with a PRS-1 Argon tail radar that allows an attempt at RE radar ranging when firing at targets in the 30– arc. The lock-on roll is 7–.                                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |             |  |  |  |                                                         |  |  |  |                                   |  |  |  |
| 4. Articulated Guns. In addition to its fixed guns, the aircraft has six 23 mm AM-23 guns, two in the forward dorsal twin turret, two in the rear ventral twin turret turret, and two in the tail turret. They can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 2/1/1 and are modified only by the target size, a –1 modifier when firing into the 60– arc, and possibly a –1 modifier for RE radar ranging with the tail radar. The AtA damage rating is 4. The ammunition is 10.0. |  |  |  |             |  |  |  |                                                         |  |  |  |                                   |  |  |  |
