| Notes:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |           |  |           |  |                                        |  |       |  |        |  |                                                                 |  |        |  |     |  |  |  |  |  |  |  |
| 1. The Tupolev Tu-16K is a maritime strike aircraft. It is derived from the Tu-16K. The NATO reporting name for the aircraft is Badger-G, and for the tail radar is Bee Hind.                                                                                                                                                                                                                                                                                                                                                                                               |  |           |  |           |  |                                        |  |       |  |        |  |                                                                 |  |        |  |     |  |  |  |  |  |  |  |
| 2. DDS capacity is 60 CH and 20 FL or 80 CH.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |           |  |           |  |                                        |  |       |  |        |  |                                                                 |  |        |  |     |  |  |  |  |  |  |  |
| 3. Tail Radar. Equipped with a PRS-1 Argon tail radar that allows an attempt at RE radar ranging when firing at targets in the 30– arc. The lock-on roll is 7–.                                                                                                                                                                                                                                                                                                                                                                                                             |  |           |  |           |  |                                        |  |       |  |        |  |                                                                 |  |        |  |     |  |  |  |  |  |  |  |
| 4. Articulated Guns. In addition to its fixed guns, the aircraft has six 23 mm AM-23 guns, two in the forward dorsal twin turret, two in the rear ventral twin turret turret, and two in the tail turret. They can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are 2/1/1 and are modified only by the target size, a –1 modifier when firing into the 60– arc, and possibly a –1 modifier for RE radar ranging with the tail radar. The AtA damage rating is 4. The ammunition is 10.0. |  |           |  |           |  |                                        |  |       |  |        |  |                                                                 |  |        |  |     |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |           |  |           |  |                                        |  |       |  |        |  | VPs: 34/23/11/6                                                 |  |        |  |     |  |  |  |  |  |  |  |

## Mikoyan-Gurevich MiG-19

The Mikoyan-Gurevich MiG-19 was a day fighter and interceptor. Its NATO reporting name is Farmer.

### Versions

#### MiG-19

The initial MiG-19 day fighter was significantly different in design from its predecessor, the MiG-17, as it had twin Mikulin RD-9 engines. It was the first Soviet production aircraft capable of supersonic speed in level flight. The initial versions were the only versions with a conventional (not an all-flying) tail. The armament was three 23mm NR-23 cannons, two in the wings and one under the nose. Its NATO reporting name is Farmer-A.

The MiG-19 entered service with the Soviet VVS in 1955.

#### MiG-19S and MiG-19SF

The MiG-19S was an improved version of the MiG-19. It incorporated an all-flying tail and updated avionics.

The early versions of the MiG-19S kept the armament of three 23 mm NR-23 guns used in the initial MiG-19, but later versions switched to three 30 mm NR-30 guns. The NR-30 has slightly better rate of fire and muzzle velocity compared to the NR-23 and fires a much heavier shell. To a large degree, it combines the dogfight characteristics of the NR-23 with the anti-bomber characteristics of the N-37.

The MiG-19SF has slightly more powerful engines, but is otherwise very similar to the late MiG-19S.

The NATO reporting name of the MiG-19S/SF is Farmer-C.

The MiG-19S was built under license in Czechoslovakia as the Aero S-105 and in China as the Shenyang J-6/F-6.

The MiG-19S entered service with the Soviet VVS in 1956. It later served with the Afghan Air Force, the Albanian Air Force, the Bulgarian Air Force, the Chinese PLAAF, the Czechoslovak Air Force, the East German Air Force, the Egyptian Air Force, the Indonesian Air Force, the Iraqi Air

Force, and the Pakistan Air Force (in addition to Shenyang F-6s).

#### MiG-19P

The MiG-19P was an all-weather interceptor. It was based on the MiG-19S, but had a modified nose and cockpit incorporating the RP-1 Izumrud (Scan Odd) radar and had only the guns in the wing roots. Again, the early versions had two 23 mm NR-23 guns, but later versions had two 30 mm NR-30 guns. In addition to underwing fuel tanks, it often carried two underwing rocket pods for use against bombers. Its NATO reporting name is Farmer-B.

The MiG-19P was built under license in China as the Shenyang J-6A.

The MiG-19P entered service with the Soviet PVO, VVS, and AV-MF in 1956. It later served with the Bulgarian Air Force, the Chinese PLAAF, the Czechoslovak Air Force, the Iraqi Air Force, the Polish Air Force, and the Romanian Air Force.

#### MiG-19PM

The MiG-19PM was also an all-weather interceptor. It was essentially a MiG-19P with the guns removed, provision for four Kaliningrad K-5 (AA-1 Alkali) beam-riding missiles, and the radar modified to support the missiles. Its NATO reporting name is Farmer-E.

The MiG-19PM was built under license and in China as the Shenyang J-6B.

The MiG-19PM entered service with the Soviet PVO in 1957. It later served with the Albanian Air Force, the Bulgarian Air Force, the Chinese PLAAF, the Czechoslovak Air Force, the East German Air Force, the Hungarian Air Force, the Iraqi Air Force, the Polish Air Force, and the Romanian Air Force.

### Armament and Stores

The cannon-armed MiG-19s were equipped with either all 23 mm NR-23 or all 30 mm NR-30 cannons. Using homogeneous weapons was considered an improvement over the mixture of two 23 mm NR-23 and one 37 mm N-37 cannons in the MiG-15 and MiG-17, as the different calibers of these earlier guns had very different ballistic characteristics and so the shell streams diverged at long range.

Like most of its contemporaries, the MiG-19 suffered from short range on internal fuel, and this was mitigated by the use of under-wing 760L FTs.

The MiG-19 was potentially better suited to ground attack than the earlier MiG-15 or MiG-17, as it had four under-wing stations and so could carry both FTs and air-to-ground ordnance. However, this does not seem to have been exploited heavily except by the Pakistan Air Force. A typical air-to-ground load would be four ORO-57K RPs (on DRs) with a total of thirty-two 57 mm rockets along with two FTs.

## **Combat**

A US reconnaissance flight was shot down by PVO MiG-19s in 1960. However, Soviet MiG-19s were not able to intercept U-2 overflights.

Egyptian MiG-19s were used for ground-attack missions in 1962 during the North Yemen Civil War. Egyptian and Syrian MiG-19s saw combat in the lead-up to and during the 1967 War. In Egyptian service, it also saw combat in the War of Attrition.

| Notes:              |       |           |  |     | 1. The Mikoyan-Gurevich MiG-19S is a day fighter. It is an improved version of the original MiG-19 with an all-flying tail. This early variant has three 23 mm NR-23 cannons. The NATO reporting name for the aircraft is Farmer-C.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |  |  |           |  |                                   |       |  |  |     | 1. May use 760L FTs on stations 1 and 4.<br>2. May use ORO-57K RPs on stations 2 and 3. From 1957, may use DRs each with two ORO-57K RPs on stations 2 and 3. |     |     |     |     |                          |  |  |  |  |               |  |  |  |  |

| 1. The Mikoyan-Gurevich MiG-19S is a day fighter. It is an improved version of the original MiG-19 with an all-flying tail. This late variant has three 30 mm NR-30 cannons in place of the three 23 mm NR-23 cannons of the early version. The NATO reporting name for the aircraft is Farmer-C. |           |           |           |       |         | 1. May use 760L FTs on stations 1 and 4.                                                                          |         |     |  |  |  |
| 2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure.                                                                                                                                |           |           |           |       |         | 2. May use ORO-57K RPs on stations 2 and 3. From 1957, may use DRs each with two ORO-57K RPs on stations 2 and 3. |         |     |  |  |  |

| Notes:<br>1. The MiG-19P is an interceptor. It is similar from the MiG-19S day fighter, but has the RP-1 Izumrud radar and omits the gun under the fuselage. This early variant has two 23 mm NR-23 cannons. The NATO reporting name for the aircraft is Farmer-B and for the radar is Scan Odd.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |       |           |     |           |                                        |                    |     |      |     | 1. May use 760L FTs on stations 1 and 4.                                                                          |     |     |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |       |           |     |           |                                        |                    |     |      |     | 2. May use ORO-57K RPs on stations 2 and 3. From 1957, may use DRs each with two ORO-57K RPs on stations 2 and 3. |     |     |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |       |           |     |           |                                        |                    |     |      |     | 3. From 1961, may use AA-2 IRMs.                                                                                  |     |     |  |  |  |  |  |

| <b>Notes:</b><br>1. The MiG-19P is an interceptor. It is similar from the MiG-19S day fighter, but has the RP-1 Izumrud radar and omits the gun under the fuselage. This late variant has two 30 mm NR-30 cannons in place of the two 23 mm NR-23 cannons of the early version. The NATO reporting name for the aircraft is Farmer-B and for the radar is Scan Odd.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |                 |                    | 1. May use 760L FTs on stations 1 and 4.                                                                          |                                 |                                   |              |                      |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                 |                    | 2. May use ORO-57K RPs on stations 2 and 3. From 1957, may use DRs each with two ORO-57K RPs on stations 2 and 3. |                                 |                                   |              |                      |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                 |                    | 3. May use 760L FTs on stations 1 and 6.<br>2. May use AA-1 BRMs and RHMs. |  |         |  |         |  |     |  |  |  |
| Notes:<br>1. The MiG-19PM is an interceptor. It is a development of the MiG-19P with AA-1 missiles replacing the cannons. The NATO reporting name for the aircraft is Farmer-E and for the radar is Scan Odd.<br>2. If a BT or ET is performed in the HI+ altitude bands, roll one die for each facing change after the first. On a 1 the aircraft suffers a maneuvering departure. |  |           |  |           |                     |           |  |       |  |                                                                            |  |         |  |         |  |     |  |  |  |

| 1. The Mikoyan-Gurevich MiG-21F-13 is a day fighter. This is an improved version of the MiG-21F, with provision for AA-2 IRMs, but with only one NR-30 gun and still without a search radar. The NATO reporting name for the aircraft is Fishbed-C and for the radar is High Fix.                                                                                                                    |             |            |     |            |             |                    |     |            |        |                                  |     |                                   |       |           |     |     |       |     |     |     |       |     |     |     |          |     |     |   |                                           |  |  |  |  |
| 2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc.                                                                                                                                                                                                                                                                                                         |             |            |     |            |             |                    |     |            |        |                                  |     |                                   |       |           |     |     |       |     |     |     |       |     |     |     |          |     |     |   |                                           |  |  |  |  |

May use AA-1 BRMs and AA-2 IRMs.                                    |             |            |     |           |  |     |
| Notes:                                                                                                                                                                                                                                                                                     |             |            |  |            |                     |                    |     |            |                |                                                                        |             |            |     |           |  |     |
| 1. The Mikoyan-Gurevich MiG-21PF is an all-weather interceptor. It is equipped with the RP-21 radar, a more powerful engine than the MiG-21F versions, and the ability to use AA-1 BRMs and AA-2 IRMs. The NATO reporting name for the aircraft is Fishbed-D and the radar is Spin Scan-A. |             |            |  |            |                     |                    |     |            |                |                                                                        |             |            |     |           |  |     |
| 2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc.                                                                                                                                                                                               |             |            |  |            |                     |                    |     |            |                |                                                                        |             |            |     |           |  |     |

| 1. The Mikoyan-Gurevich MiG-21FL is an all-weather interceptor. This is an export version developed from the MiG-21PF, but with the less powerful engine from the MiG-21F, no capability to use the AA-1 missile, and a downgraded version of the RP21 designated R1L. The NATO reporting name for the aircraft is Fishbed-D. |  |             |  |            |                                           |            |  |            |  |                    |  |           |  |            |                                       |           |  |     |  |                          |  |  |  |  |          |  |  |  |  |                                   |  |  |  |  |  |  |  |  |  |
| 2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc.                                                                                                                                                                                                                                  |  |             |  |            |                                           |            |  |            |  |                    |  |           |  |            |                                       |           |  |     |  |                          |  |  |  |  |          |  |  |  |  |                                   |  |  |  |  |  |  |  |  |  |

| Notes:<br>1. The Mikoyan-Gurevich MiG-21S is an all-weather interceptor. It is equipped with the RP-22 radar and is able to use the AA-2 IRMs and RHMs and AA-1 BRMs. It has internal guns, but is able to mount a GP-9 gun pod. The NATO reporting name for the aircraft is Fishbed-J and for the radar is Jay Bird.<br>2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc. |             |            |  |            |                     |                    |                       |            |                                                                                                         | 1. | Notes: 1. The Mikoyan-Gurevich MiG-21M is an all-weather interceptor. It is an export version of the MiG-21S, with the RP-21MA radar instead of the RP-22 and armed with an internal GSh-23L gun and AA-2 IRMs. The NATO reporting name for the aircraft is Fishbed-J and for the radar is Spin Scan-B. 2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc. |             |            |  |            |                                              |                    |         |            |                                                                                                         |                                |         |                                   |  |           |  |     |  |  |

| Notes:<br>1. The Mikoyan-Gurevich MiG-21SM is an all-weather interceptor. It is an improved version of the MiG-21S, with a new engine and an internal GSh-21L cannon. The NATO reporting name for the aircraft is Fishbed-J and for the radar is Jay Bird.<br>2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc. |             |            |  |            |                     |                    |                       |            |                                                                                                         | 1 and 5 550 BB RP RK EP FT IRM RHM                              |  |                                   |  |           |  |     |

| 1. The Mikoyan-Gurevich MiG-21MF is an all-weather interceptor. It is an export version of the MiG-21SM. The NATO reporting name for the aircraft is Fishbed-J and for the radar is Jay Bird.<br>2. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc. |             |            |  |            |                                                                                                         |                    |     |            |    | 1 and 5 550 BB RP RK EP FT MDR IRM                                |  |            |  |           |  |     |

May use R-3, R-13, and R-60 IRMs (AA-2 and AA-8). May use R-3R RHM (AA-2C). MDRs are for R-60s only.                                                          |  |            |  |                                       |  |     |  |               |  |  |  |
| 1. The Mikoyan-Gurevich MiG-21bis is an all-weather interceptor. It is a development of the MiG-21SM with an improved engine. The NATO reporting name for the aircraft is Fishbed-L/N and for the radar is Jay Bird.                                                              |  |             |  |                 |                 |            |     |                    |                |                    |             | 2. Station 3 may carry a 490L FT or a special 800L FT. If carrying an 800L FT, the station is overloaded and the aircraft must remain below low transonic speed. |  |            |  |                                       |  |     |  |               |  |  |  |
| 2. Low transonic drag (LTD).                                                                                                                                                                                                                                                      |  |             |  |                 |                 |            |     |                    |                |                    |             |                                                                                                                                                                  |  |            |  |                                       |  |     |  |               |  |  |  |
| 3. The thick front canopy gives a +1 modifier to sighting rolls for targets in the 180+ arc.                                                                                                                                                                                      |  |             |  |                 |                 |            |     |                    |                |                    |             |                                                                                                                                                                  |  |            |  |                                       |  |     |  |               |  |  |  |
| 4. Emergency AB (ChR AB) may be used if speed is at least high transonic and altitude is 13 or less. When used, the AB power is 5.0/4.5/4.0 and the fuel use is 7.5. Emergency AB cannot be used for more than two consecutive game turns or more than eight game turns in total. |  |             |  |                 |                 |            |     |                    |                |                    |             |                                                                                                                                                                  |  |            |  |                                       |  |     |  |               |  |  |  |

|                         |  |  |                  |  |  |                        |  |  |      |  |  | <div>Load Notes:</div>                                                                                                                                                                                                                                                                                  |  |  |  |  |  |
|                         |  |  |                  |  |  |                        |  |  |      |  |  | 1. Stations 1 and 5 are the wing-glove stations. They may each carry: (a) one Kh-22M/MA (AS-4 Kitchen) ASM/NAM, (b) nine FAB-250 BBs on a MR, (c) six FAB-500 BBs on a MR, (d) one FAB-1500 BB, or (e) one FAB-3000 BB.                                                                                 |  |  |  |  |  |
|                         |  |  |                  |  |  |                        |  |  |      |  |  | 2. Stations 2 and 4 are the fuselage external stations. They may carry the same bomb loads as stations 1 and 5.                                                                                                                                                                                         |  |  |  |  |  |
|                         |  |  |                  |  |  |                        |  |  |      |  |  | 3. Station 3 is the internal bay. It may carry: (a) one Kh-22M/AM (AS-4 Kitchen) ASM/NAM, (b) thirty-three FAB-250 BBs, (c) eighteen FAB-500 BBs, (d) six FAB-1500 BBs, or (e) naval mines.                                                                                                             |  |  |  |  |  |
|                         |  |  |                  |  |  |                        |  |  |      |  |  | 4. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 2000 fuel points (40 load points). |  |  |  |  |  |

| 1. The Tupolev Tu-22M2 is a bomber and maritime strike aircraft. The NATO reporting name for the aircraft is Backfire-B and for the radar is Down Beat.<br>2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed at the end of the aircraft’s move if the maximum turn rate used is TT or less. The data shown here are for the mid geometry.<br>3. High transonic drag (HTD). Rapid acceleration (RA).<br>4. DDS capacity is 100 decoys.<br>5. Tail Radar. Equipped with a Argon-2 tail radar with ECCM 1, arc 60–, search 30-7, track 12-7, and lock-on 7–.<br>6. Articulated Guns. The guns can only fire at locked-on targets in the 30– arc. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size. |  |           |  |           |                                        |           |  |       |  | 1. Stations 1 and 5 are the wing-glove stations. They may each carry: (a) one Kh-22M/MA (AS-4 Kitchen) ASM/NAM, (b) nine FAB-250 BBs on a MR, (c) six FAB-500 BBs on a MR, (d) one FAB-1500 BB, or (e) one FAB-3000 BB.<br>2. Stations 2 and 4 are the fuselage external stations. They may carry the same bomb loads as stations 1 and 5.<br>3. Station 3 is the internal bay. It may carry: (a) one Kh-22M/AM (AS-4 Kitchen) ASM/NAM, (b) thirty-three FAB-250 BBs, (c) eighteen FAB-500 BBs, (d) six FAB-1500 BBs, or (e) naval mines.<br>4. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 2000 fuel points (40 load points). |  |           |  |           |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |           |  |           |                                        |           |  |       |  | VPs: 46/31/15/8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |           |  |           |  |     |  |  |  |

| 1. The Tupolev Tu-22M2 is a bomber and maritime strike aircraft. The NATO reporting name for the aircraft is Backfire-B and for the radar is Down Beat.                                                                                            |  |            |  |           |                                    |           |  |       |  | 1. Stations 1 and 5 are the wing-glove stations. They may each carry: (a) one Kh-22M/MA (AS-4 Kitchen) ASM/NAM, (b) nine FAB-250 BBs on a MR, (c) six FAB-500 BBs on a MR, (d) one FAB-1500 BB, or (e) one FAB-3000 BB.                                                                                 |  |           |  |           |  |     |  |  |  |
| 2. This is a variable-geometry aircraft with allowed geometries of forward, mid, and aft. The geometry may be changed at the end of the aircraft's move if the maximum turn rate used is TT or less. The data shown here are for the aft geometry. |  |            |  |           |                                    |           |  |       |  | 2. Stations 2 and 4 are the fuselage external stations. They may carry the same bomb loads as stations 1 and 5.                                                                                                                                                                                         |  |           |  |           |  |     |  |  |  |
| 3. High bleed rate (HBR). Low transonic drag (LTD). Poor supersonic maneuverability (PSSM). Rapid acceleration (RA).                                                                                                                               |  |            |  |           |                                    |           |  |       |  | 3. Station 3 is the internal bay. It may carry: (a) one Kh-22M/AM (AS-4 Kitchen) ASM/NAM, (b) thirty-three FAB-250 BBs, (c) eighteen FAB-500 BBs, (d) six FAB-1500 BBs, or (e) naval mines.                                                                                                             |  |           |  |           |  |     |  |  |  |
| 4. DDS capacity is 100 decoys.                                                                                                                                                                                                                     |  |            |  |           |                                    |           |  |       |  | 4. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 2000 fuel points (40 load points). |  |           |  |           |  |     |  |  |  |
| 5. Tail Radar. Equipped with a Argon-2 tail radar with ECCM 1, arc 60–, search 30-7, track 12-7, and lock-on 7–.                                                                                                                                   |  |            |  |           |                                    |           |  |       |  |                                                                                                                                                                                                                                                                                                         |  |           |  |           |  |     |  |  |  |
| 6. Articulated Guns. The guns can only fire at locked-on targets in the 30– arc. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size.                    |  |            |  |           |                                    |           |  |       |  |                                                                                                                                                                                                                                                                                                         |  |           |  |           |  |     |  |  |  |

## **Chapter 9**

# **US Aircraft**

## North American F-51 Mustang

The North American F-51 Mustang fighter was originally designed and built to British specifications. The early versions were aerodynamically superb and performed excellently at low altitudes, but their performance fell off above 15,000 feet as their engines lacked a supercharger. Once this deficiency was remedied, later versions served very successfully as a long-range escort fighter with the USAAF in Europe and the Pacific. The F-51D was the most numerous version.

After WWII and now in the service of the USAF, the F-51 began to be replaced by the F-80, but nevertheless was extensively used in the Korean War as a fighter-bomber, where its endurance and ability to operate from poor airstrips gave it advantages over contemporary jets. Indeed, in the initial stages of the war, several USAF squadrons converted from the F-80 back to the F-51. Its principal disadvantage as a fighter-bomber was the vulnerability of its liquid-cooling system to small arms fire.

The RF-51D was the photo-reconnaissance version. It was equipped with two K-24 cameras in the rear fuselage, one oblique facing left and the other overhead.

The USAF used the F-51D and RF-51D in the Korean War, although as adequate airfields in the Korean peninsula became available, they were replaced by the F-80C, RF-80C, and other jets. The F-51D was also used in Korea by No. 77 Sqn RAAF until it was replaced by the Meteor F.8 in April 1951, by No. 2 Sqn SAAF until it was replaced by the F-86 in December 1952, and by the RoKAF. They also served in the air forces of many other countries, and in particular saw action in IAF service in both the 1948 and 1956 wars.

The gun armament of the F-51D is six .50 cal M2 machine guns with about 300 rounds per gun. A typical ground-to-air load in the Korean War would be a pair of 100 lb, 250 lb, or 500 lb bombs or a pair of 110 US gal (750 lb) napalm tanks on the inner wing stations, often combined with six HVAR rockets that could be carried on the outer wing stations. In RAAF service, RP-3 rockets were also used instead of HVAR rockets. The RF-51D is equipped with guns and the inner-wing stations, but not the outer-wing stations for rockets.

In earlier USAAF service in WWII, the F-51D and RF-51D were designated P-51D and F-6D.

## Vought F4U and AU Corsair

The Vought F4U Corsair fighter was designed and built for the USN. It featured superb performance, but its long nose and a cockpit well to the rear meant it was a challenge to land on an aircraft carrier. During its long gestation, it was employed as a land-based fighter with the USMC, but by the end of WWII, it was regarded as the best carrier-based fighter in service. By the time of the Korean War, it had been replaced as a day fighter by the jet-engined F9F Panther, but continued to serve as a fighter-bomber in the USN and USMC.

The F4U-4 is the last version that was constructed during WWII and maintains the original armament of six .50 cal M2 machine guns. The F4U-4B is basically a -4 with four 20 mm M3 cannon substituting the machine guns. These two versions were used in large numbers in the Korean War for close air support and interdiction, both by the USN and USMC. The -4 was preferred for carrier operations, as its guns were easier to service in the confined spaces of the hanger deck of an aircraft carrier, and the -4B tended to be used by land-based USMC squadrons.

The F4U-5 is a post-WWII version with many refinements based on experience with the -4 and maintaining the 20 mm armament of the -4B. For reasons that are not clear to me, it did not see service in the Korean War.

The AU-1 is a dedicated close air support aircraft for the USMC, derived from the F4U-5, but with heavier armor, a simpler supercharger designed for operations at lower altitudes, and additional weapons stations. It entered service in 1952 and saw combat in the Korean War.

The gun armament of the -4 is six .50 cal M2 machine guns with about 400 rounds per gun (400 rounds for the inner two and 375 rounds for the outer one). The -4B, -5, and AU-1 have four 20 mm M3 cannon with 231 rounds per gun.

A typical air-to-ground armament for the -4 and -4B in the Korean War would be TODO.

| Notes:<br>1. The Vought F4U-4B Corsair is a propeller-driven, carrier-capable day fighter and fighter-bomber. It is developed from the F4U-4 and has four 20 mm M3 cannon in place of the six .50 cal machine guns.<br>2. High transonic drag (HTD). Low bleed rate (LBR).<br>3. If speed 4.5 or more, speedbrakes can only be used if they were used on the previous game turn. |             |           |  |           |                     |           |                    |            |  | 1. Stations 1 to 4 and 7 to 10 are closely spaced and have restrictions: a station adjacent to one other loaded with a store of more than 250 lb may only carry a store of 250 lb or less and a station between two others loaded with stores of more than 250 lb may not be used. In the first months of the Korean War, they could only carry HVAR RKs. Later, they could also carry ATAR RKs and BBs. Only one RK can be carried per station. |  |            |  |           |  |     |
|                                                                                                                                                                                                                                                                                                                                                                                  |             |           |  |           |                     |           |                    |            |  | 2. Stations 1 to 4 and 7 to 10 are closely spaced and have restrictions: a station adjacent to one other loaded with a store of more than 250 lb may only carry a store of 250 lb or less and a station between two others loaded with stores of more than 250 lb may not be used. In the first months of the Korean War, they could only carry HVAR RKs. Later, they could also carry ATAR RKs and BBs. Only one RK can be carried per station.                                                                                                             |                    |     |        |     |       |     |     |

| 1. The Vought AU-1 Corsair is a propeller-driven, carrier-capable close-air-support airfraf, developed for the USMC from the F4U-5. It has additional armor, oil coolers relocated to reduce vulnerability, simplified superchargers, and two additional weapon stations. |       |           |  |           |                     |                    |     |       |     | 1. Stations 1 to 5 and 9 to 13 are closely spaced and have restrictions: a station adjacent to one other loaded with a store of more than 250 lb may only carry a store of 250 lb or less and a station between two others loaded with stores of more than 250 lb may not be used. They make carry HVAR and ATAR RKs. Only one RK can be carried per station. |     |     |     |    |     |     |
| 2. High transonic drag (HTD). Low bleed rate (LBR).                                                                                                                                                                                                                       |       |           |  |           |                     |                    |     |       |     | 2. Stations 6, 7, and 8 may carry 150 US gal (550L) FTs.                                                                                                                                                                                                                                                                                                      |     |     |     |    |     |     |
| 3. If speed 4.5 or more, speedbrakes can only be used if they were used on the previous game turn.                                                                                                                                                                        |       |           |  |           |                     |                    |     |       |     | 3. ## Douglas B-26 and A-26 Invader and Counter-Invader

The Douglas B-26 Invader is a bomber and attack aircraft. It entered service in the USAAF before the end of WWII and saw combat in both the European and Pacific Theaters. It later served with the USAF in the Korean War, during Operation Farm Gate in South Vietnam, and finally flying "Nimrod" interdiction missions over Laos. Many of its missions in Korea, Vietnam, and Laos were flown at night. It was also used by the Armée de l'air in the First Indochina War, the CIA in the Bay of Pigs Invasion, and in small number in many other conflicts in the 1950s and 1960s.

The B-26 was designed with two remote-control turrets, one dorsal and one ventral, similar to the rear turrets of the B-29 and each equipped with two .50 cal M2 machine guns. The turrets were operated by a single gunner, positioned behind the bomb bay, who monitored the sky through large ventral and dorsal windows and aimed both turrets with an periscope sight. The lower turret was removed in many aircraft to give more fuel capacity. In later service, both turrets were removed as defensive guns were not useful for its missions in Vietnam and Laos.

The B-26 also had a number of different noses, with the most common being the solid nose with eight .50 cal M2 machine guns on the B-26B and the gunless glass nose (which allowed the use of a bomb sight) on the B-26C. There was also some variation in guns fitted in the wings.

The B-26K was a rebuilt version, necessary after several earlier aircraft had been lost because of metal fatigue in the main wing spar. It saw combat from 1966 to 1969 with the USAF, flying from Thailand on nighttime interdiction missions in Laos.

The Invader was originally designated A-26. In 1948, it was redesignated B-26, reusing the designation of the earlier B-26 Marauder which by then had left service. In 1966, the B-26K was redesignated A-26A to avoid the perception of a bomber being based in supposedly neutral Thailand.

Typical armament in the Korean War, beyond the guns, was 500 or 1000 lb bombs in the bomb bay and 500 or 1000 lb bombs, 110 gal napalm cans, or HVARs or parachute flares on the wing stations.

Typical armament of Farm Gate B-26s was TODO.

Typical armament of Nimrod B-26Ks was fragmentation and incendiary bombs in the bomb bay, and then a mixture of illumination pods, napalm, LAU-3A rocket pods, and CBU's under the wings.

- B-26B (Two Turrets)
- B-26B (One Turret)

- B-26B (No Turrets)
- B-26C (Two Turrets)
- B-26C (One Turret)
- B-26C (No Turrets)
- B-26K
- A-26A

| <b>Notes:</b><br>1. The Douglas B-26B Invader is a attack aircraft. This variant has a solid nose, nose and wing guns, and both dorsal and ventral turrets. Prior to 1948, it was designated A-26B.<br>2. Low roll rate (LRR).<br>3. Articulated Guns. In addition to its fixed guns, this variant of the B-26 is equipped with dorsal and ventral turrets each with two .50 cal M2 guns. The turrets can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. As there is only one gunner, they may fire on only one aircraft per game turn. The hit rolls are 2/1/1 and the only modifiers are target size and a –1 modifier when firing into the 60–arc. The AtA damage rating is 2. The ammunition is 18.0. |                                |                                                                                                                                                                                                                                                                                                                                                                            |                                   |              |                      |         |     |    |         |     |       |   |       |    |               |     |    |                 |     |    |  |

| 1. The Douglas B-26B Invader is a propeller-driven attack aircraft. This variant has a solid nose, nose and wing guns, and only the dorsal turret. In place of the ventral turret, it has an extra fuel tank. Prior to 1948, it was designated A-26B.                                                                                                                                                                                                                                                                                                                             |                     |                    |                 | 1. Either stations 1 and 5 or stations 6 to 9 and 16 to 19 can be used.                                                                                                                                   |              |                      |
| 2. Low roll rate (LRR).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                     |                    |                 | 2. Either stations 2 and 4 or stations 10 to 15 can be used.                                                                                                                                              |              |                      |
| 3. Articulated Guns. In addition to its fixed guns, this variant of the B-26 is equipped with a dorsal turret with two .50 cal M2 guns. The turret can fire in any direction at targets that are at the same altitude or higher. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. As there is only one gunner, it may fire on only one aircraft per game turn. The hit rolls are 2/1/1 and the only modifiers are target size and a –1 modifier when firing into the 60– arc. The AtA damage rating is 2. The ammunition is 18.0. |                     |                    |                 | 3. Station 5 is the internal bomb bay. Load options are: (a) two 2,000 lb bombs, (b) four 1,000 lb bombs, (c) eight 500 or 250 lb bombs, or (d) sixteen 100 lb bombs. Any bombs carried must be low-drag. |              |                      |

| <b>Notes:</b><br>1. The Douglas B-26B Invader is a propeller-driven attack aircraft. This variant has a solid nose, nose and wing guns, and no turrets. In place of the ventral turret, it has an extra fuel tank. Prior to 1948, it was designated A-26B.<br>2. Low roll rate (LRR).<br>3. Articulated Guns. In addition to its fixed guns, this variant of the B-26 is equipped with a dorsal turret with two .50 cal M2 guns. The turret can fire in any direction at targets that are at the same altitude or higher. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. As there is only one gunner, it may fire on only one aircraft per game turn. The hit rolls are 2/1/1 and the only modifiers are target size and a –1 modifier when firing into the 60– arc. The AtA damage rating is 2. The ammunition is 18.0. |                                                                                                      | <b>Load Notes:</b><br>1. Either stations 1 and 5 or stations 6 to 9 and 16 to 19 can be used.<br>2. Either stations 2 and 4 or stations 10 to 15 can be used.<br>3. Station 5 is the internal bomb bay. Load options are: (a) two 2,000 lb bombs, (b) four 1,000 lb bombs, (c) eight 500 or 250 lb bombs, or (d) sixteen 100 lb bombs. Any bombs carried must be low-drag.                                            |         |       |               |         |     |    |         |     |       |   |       |    |               |     |    |                 |     |    |

| <b>Notes:</b><br>1. The Douglas B-26C Invader is a propeller-driven attack aircraft. This variant has a glazed nose, wing guns, and both dorsal and ventral turrets. Prior to 1948, it was designated A-26C.<br>2. Low roll rate (LRR).<br>3. Articulated Guns. In addition to its fixed guns, this variant of the B-26 is equipped with dorsal and ventral turrets each with two .50 cal M2 guns. The turrets can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. As there is only one gunner, they may fire on only one aircraft per game turn. The hit rolls are 2/1/1 and the only modifiers are target size and a –1 modifier when firing into the 60–arc. The AtA damage rating is 2. The ammunition is 18.0.<br>4. Bomb system is ballistic (–1) if doing level bombing from four or more altitude levels above the target. |  |                                |  |                                     |  |

| <b>Notes:</b><br>1. The Douglas B-26C Invader is a propeller-driven attack aircraft. This variant has a glazed nose, wing guns, and no turrets. In place of the ventral turret, it has an extra fuel tank. Prior to 1948, it was designated A-26C.<br>2. Low roll rate (LRR).<br>3. Articulated Guns. In addition to its fixed guns, this variant of the B-26 is equipped with a dorsal turret with two .50 cal M2 guns. The turret can fire in any direction at targets that are at the same altitude or higher. These guns may return fire twice per game turn in response to gun attacks or conduct one attack. As there is only one gunner, it may fire on only one aircraft per game turn. The hit rolls are 2/1/1 and the only modifiers are target size and a –1 modifier when firing into the 60– arc. The AtA damage rating is 2. The ammunition is 18.0.<br>4. Bomb system is ballistic (–1) if doing level bombing from four or more altitude levels above the target. |                                                                                                      | <b>Load Notes:</b><br>1. Either stations 1 and 5 or stations 6 to 9 and 16 to 19 can be used.<br>2. Either stations 2 and 4 or stations 10 to 15 can be used.<br>3. Station 5 is the internal bomb bay. Load options are: (a) two 2,000 lb bombs, (b) four 1,000 lb bombs, (c) eight 500 or 250 lb bombs, or (d) sixteen 100 lb bombs. Any bombs carried must be low-drag.                                            |         |       |               |         |     |    |         |     |       |   |       |    |               |     |    |                 |     |    |

| <b>Notes:</b><br>1. The Douglas B-26K Counter-Invader is a propeller-driven attack aircraft. It is an upgrade of the B-26B/TB-26B/B-26C by On Mark Engineering, with strengthened wings, wing-tip fuel tanks, a solid nose, and nose guns, but without wing guns. It was subsequently redesignated A-26A.<br>2. Low roll rate (LRR).<br>3. When the internal fuel is more than 620 fuel points, the fixed wing-tip tanks are in use and the vulnerability is +0.<br>4. Bomb system is ballistic (–1) if doing level bombing from four or more altitude levels above the target. |                  |                                |     | 1. Each wing can carry a maximum load of 2,000 lb.<br>2. Station 5 is the internal bomb bay. Load options are: (a) two 2,000 lb bombs, (b) four 1,000 lb bombs, (c) eight 500 or 250 lb bombs, or (d) sixteen 100 lb bombs. Any bombs carried must be low-drag.      |                                    |              |                      |             |     |          |             |     |             |   |       |    |

| <div>1. The Douglas B-26K Counter-Invader is a propeller-driven attack aircraft. It is an upgrade of the B-26B/TB-26B/B-26C by On Mark Engineering, with strengthened wings, wing-tip fuel tanks, a solid nose, and nose guns, but without wing guns. It was previously designated B-26K.</div> <div>2. Low roll rate (LRR).</div> <div>3. When the internal fuel is more than 620 fuel points, the fixed wing-tip tanks are in use and the vulnerability is +0.</div> <div>4. Bomb system is ballistic (–1) if doing level bombing from four or more altitude levels above the target.</div> |  |           |  |           |  |                                                                                                           |  |       |  |        |  |               |  |        |  |     |  | 1. Each wing can carry a maximum load of 2,000 lb. |  |  |  |  |  | 2. Station 5 is the internal bomb bay. Load options are: (a) two 2,000 lb bombs, (b) four 1,000 lb bombs, (c) eight 500 or 250 lb bombs, or (d) sixteen 100 lb bombs. Any bombs carried must be low-drag. |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |           |  |           |  |                                                                                                           |  |       |  |        |  |               |  |        |  |     |  |                                                    |  |  |  |  |  |                                                                                                                                                                                                           |  |  |  |  |  |

## Boeing B-29 Superfortress

The Boeing B-29 Superfortress is a strategic bomber. It entered service in the USAAF before the end of WWII and saw combat in the Pacific Theaters. It later served with the USAF in the Korean War.

The defensive armament of the B-29 is four remote-control turrets, two dorsal and two ventral, each equipped with two .50 cal M2 machine guns and a tail station with two .50 cal M2 machine guns and one 20 mm M2 cannon. Later models have four .50 cal in the forward dorsal turret. The ballistic characteristics of the 20 mm were not well-matched to the .50 cal, and it was later removed or replaced by a third .50 cal. Each gun has 500 rounds of ammunition.

The RB-29A is a strategic photo-reconnaissance version of the B-29A. It retains full defensive and offensive armament.

The Silverplate and Saddletree versions are adapted for delivery of nuclear bombs. The Silverplate program began during WWII — Silverplate aircraft dropped nuclear bombs on Hiroshima and Nagasaki — but was superseded by the similar Saddletree program in 1947. These aircraft were converted by removing the four turrets and their associated fire-control system and all armor removed and installing equipment for nuclear weapons and additional fuel tanks. The Saddletree aircraft are also equipped for air-to-air refueling.

A typical bomb load for the conventional variant during the Korean War was twenty 500 lb M64 or 1,000 lb M65 bombs. Occasionally, 2,000 lb M66 and 4,000 lb M56 bombs were used.

The Silverplate and Saddletree variants could carry a single Mark 3, 4, or 6 nuclear bomb.

ADCs are provided for:

- B-29A
- RB-29A
- B-29A (Silverplate)
- B-29A (Saddletree)

| <b>Notes:</b><br>1. The Boeing B-29A is a propeller-driven strategic bomber. The base variant described here is a conventional bomber.<br>2. Low roll rate (LRR).<br>3. Flight Restrictions. VD, VC, and unloading are forbidden.<br>4. Articulated Guns. The guns can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size and a –1 modifier when firing into the 60– arc. |                                                                                                       | <b>Station</b> <b>Limit</b> <b>Allowed Loads</b><br>1 and 2            10,000   BB FT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                   |

Stations 1 and 2 are the forward and rear internal bomb bays. Each can carry up to (a) two 4,000-lb M56 bombs, (b) four 2,000-lb M66 bombs, (c) six 1,000-lb M65 bombs, (d) twenty 500-lb M64 bombs, or (e) two special 640 gal (2400L) FTs. All bombs must be the same type.<br>2. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 750 fuel points (15 load points). |                                   |

| 1. The RB-29A is a propeller-driven strategic photo-reconnaissance aircraft. It is a development of the B-29A and retains full combat capability. Prior to 1948, it was designated F-13A.                                                              |           |           |           |       |  | 1. Stations 1 and 2 are the forward and rear internal bomb bays. Each can carry up to (a) two 4,000-lb M56 bombs, (b) four 2,000-lb M66 bombs, (c) six 1,000-lb M65 bombs, (d) twenty 500-lb M64 bombs, or (e) two special 640 gal (2400L) FTs. All bombs must be the same type.                       |        |        |  |  |     |
| 2. Low roll rate (LRR).                                                                                                                                                                                                                                |           |           |           |       |  | 2. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 750 fuel points (15 load points). |        |        |  |  |     |
| 3. Flight Restrictions. VD, VC, and unloading are forbidden.                                                                                                                                                                                           |           |           |           |       |  |                                                                                                                                                                                                                                                                                                        |        |        |  |  |     |
| 4. Articulated Guns. The guns can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size and a –1 modifier when firing into the 60– arc. |           |           |           |       |  |                                                                                                                                                                                                                                                                                                        |        |        |  |  |     |

Station 1 is the forward internal bomb bay and can carry a Mark 3 (weight 10,000), Mark 4 (weight 11,000) or Mark 6 (weight 8,000) nuclear bomb.<br>2. Station 2 is the rear internal bomb bay and can carry two special 640 gal (2400L) FTs.<br>3. As an exception to the normal rules for load points, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 750 fuel points (15 load points). | Station | Limit | Allowed Loads | 1 | 11,000 | BB | 2 | 10,000 | FT |

| <b>Notes:</b><br>1. The Boeing B-29A is a propeller-driven strategic nuclear bomber. This variant is a conversion of the conventional base variant under the 1947 to 1949 Saddletree program, with provision for nuclear weapons, all armor and turrets removed, air-to-air refueling, additional fuel tanks, and winterized electronics.<br>2. Low roll rate (LRR).<br>3. Flight Restrictions. VD, VC, and unloading are forbidden.<br>4. Articulated Guns. The guns can only fire at targets in the 60– arc. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size. |                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |         |       |               |   |        |    |   |        |    |

## Lockheed F-80/T-33 Shooting Star

The Lockheed F-80 Shooting Star was a day fighter and fighter-bomber. It had unswept wings and a single Allison J33 centrifugal-flow jet engine. It entered service with the USAAF shortly before the end of WWII, but did not see combat until the Korean War, in which it served extensively with the USAF as a fighter and fighter bomber. Like other early jet fighters with unswept wings, it was found to have inferior performance to the MiG-15bis and was replaced by variants of the F-86 Sabre. It later served with the air forces of Brazil, Chile, Colombia, Ecuador, Peru, and Uruguay.

The P-80A was the first version to enter service and was armed with six .50 cal M2 machine guns in the nose. It was followed by the P-80B, which replaced the M2 machine guns with faster-firing M3 machine guns, used an ejection seat, and many minor improvements. The P-80C was produced in larger numbers than both previous versions. In USAF service from 1948, the P-80 was designated the F-80.

Like many early jet fighters, the F-80 suffered from short range. This was mitigated by the provision of jettisonable wing-tip fuel tanks. These stations were designed for 165 gal tanks, but these were found to be insufficient for missions over Korea from the USAF bases in Japan. A local field modification produced the 265 gal "Misawa" tank, which gave usefully greater range and loiter time, at the cost of overloading the wing-tip stations.

The F-80C was armed with six .50 cal M3 machine guns with 300 rounds per ground. A typical weapon load for F-80Cs engaged in ground-attack missions in the Korean War was two 500 lb M64 bombs or 110 gal (750 lb) napalm bombs often supplemented by four or eight HVAR rockets on the inner-wing stations. Although bombs could in theory be carried on the wing-tip stations, this does not appear to have occurred in practice. When flying from Japan, the weapon load was often limited to four HVARs rockets.

The RF-80C was an unarmed photo-reconnaissance version of the F-80C, with cameras replacing the machine guns in the nose. It was used by the USAF.

The T-33 Shooting Star (known informally as the "T-Bird") was a two-seater trainer developed from the F-80. Most T-33As were unarmed, but a number had two .50 cal M3 machine guns. The T-33A was used by the USAF, USN, RCAF, and the air forces of Bangladesh, Belgium, Bolivia, Brazil, Burma, Canada, Chile, Republic of China (Taiwan), Colombia, Cuba, Denmark, Dominican Republic, Ethiopia, Ecuador, El Salvador, France, Federal Republic of Germany, Greece, Guatemala, Honduras, Indonesia,

Iran, Italy, Japan, Libya, Mexico, Netherlands, Nicaragua, Norway, Pakistan, Paraguay, Peru, Philippines, Portugal, Saudi Arabia, Singapore, South Korea, Spain, Thailand, Turkey, Uruguay, and Yugoslavia. Cuban T-33As saw combat during the Bay of Pigs invasion.

The RT-33A was a photo-reconnaissance version of the T-33A developed for foreign use. The nose was replaced with one with oblique and vertical cameras and the rear cockpit was used for equipment relocated from the nose of the T-33A and for additional fuel. It was used by the air forces of Belgium, Chile, Colombia, Ethiopia, France, Greece, Italy, Iran, Netherlands, Pakistan, Portugal, Saudi Arabia, Taiwan, Turkey, Thailand, and Yugoslavia. One was also used by the USAF for Project Field Goal, clandestine reconnaissance missions over Laos in the early 1960s.

Some T-33As were converted into AT-33A light attack aircraft by adding under-wing pylons to the machine guns. The AT-33A was used as a trainer by the USAF and also by the air forces of Brazil, Burma, Dominican Republic, Ecuador, Greece, Mexico, Nicaragua, Paraguay, and Uruguay.

As an exception to the normal loading rules, they may each carry a 265 gal (1000L) FT with a load of 1800 when full, but the maximum turn rate is reduced to HT until the FTs are jettisoned. Such “Misawa” tanks were used in 1950 when operating over Korea from bases in Japan.</li> <li>Stations 3 to 6 can each carry two HVAR RKs.</li> </ol> | Station | Limit | Allowed Loads | 1 and 8 | 1,100 | BB FT | 2 and 7 | 1,100 | BB RK | 3–4 and 5–6 | 280 | BB RK |

| Notes:               |             |           |     |           |                 |                    |             |                |           |                    | 1. The wing-tip stations 1 and 8 were designed to each carry a 165 gal (600L) FT with a load of 1100 when full. As an exception to the normal loading rules, they may each carry a 265 gal (1000L) FT with a load of 1800 when full, but the maximum turn rate is reduced to HT until the FTs are jettisoned. Such “Misawa” tanks were used in 1950 when operating over Korea from bases in Japan. |  |           |  |     |

| 1. The Lockheed RT-33A Shooting Star is a photo-reconnaissance version of the T-33A trainer. It is unarmed and equipped with oblique and vertical cameras in the nose. The rear cockpit is used for equipment relocated from the nose of the T-33A and for 165 gal of additional fuel. |       |           |     |           |                                        |                    |  |       |  | 1. ## Douglas AD/A-1 Skyraider

The Douglas AD Skyraider is a carrier-capable attack aircraft. Its development started during WWII, but it entered service with the USN in 1946. It was a large, single-engined propeller-driven aircraft. In 1962, it was redesignated as the A-1.

- A-1H
- AD-7
- A-1J

The Skyraider was initially armed with two 20 mm M3 cannon in the wings, but after experience in the early part of the Korean War this was increased to four in the AD-4 and subsequent versions. Later versions also had additional armor. It could also carry a heavy load on its centerline and underwing weapon stations.

In addition to the attack versions, it was adapted for radar search, anti-submarine, night attack, ECM, and night attack.

Early versions were a mainstay of the USN in the Korean War and later versions served in early part of the US involvement in the Vietnam War with the USN and USAF. It also saw limited service with the USMC. Most attack versions were single-seat, but the AD-5/A-1E had side-by-side seating for a pilot and copilot and was used by the USAF during Operation Farm Gate with a USAF pilot and nominal South Vietnamese copilot. Attack versions were also used by RVAF, Armée de l'Air, and the air forces of Cambodia, Chad, and Gabon. The AD-4W radar-search version also served with the RN as the Skyraider AEW.1.

From 1967, USAF A-1s were equipped with the Stanley rocket extraction system. While not an ejection seat, this system used a rocket to pull the pilot out of the cockpit when bailing out.

A typical air-to-ground load in the Korean War might be 500 lb M64, 1000 lb M65, or 2000 lb M66 GP bombs or 750 lb BLU-1 napalm bombs on the centerline and inner wing pylons and HVAR rockets or 100 lb M30, 250 lb M57 bombs on the outer wing pylons.

A typical air-to-ground load in the Vietnam War might include 500 lb Mk 82 or 1000 lb Mk 83 GP bombs or 750 lb BLU-27 napalm bombs on the centerline and inner wing station, a single SUU-11 gun pod on an inner-wing station, and 100 lb M47 WP bombs, 250 lb Mk 81 GP bombs, 500 lb BLU-11 napalm bombs, LAU-3 or LAU-68 70 mm rocket pods, CBU-25 cluster bomb dispensers on the outer wing pylons.

ADCs are provided for:

| 1. The Douglas AD-5 Skyraider is a propeller-driven, carrier-capable attack aircraft. It was developed from the AD-4 and added a widened fuselage and cockpit with a copilot next to the pilot, additional armor, and omitted the lateral dive brakes. In 1962, it was redesignated A-1E. |             |                |           |           |                     |                    | Load Notes:                                                                                                                                                                                                                                                                         |        |     |                         |     |     |  |  |
|                                                                                                                                                                                                                                                                                           |             |                |           |           |                     |                    | 1. Stations 1 to 6 and 10 to 15 are closely spaced and have restrictions: a station adjacent to one other loaded with a store of more than 250 lb may only carry a store of 250 lb or less and a station between two others loaded with stores of more than 250 lb may not be used. |        |     |                         |     |     |  |  |

| 1. The Douglas A-1E Skyraider is a propeller-driven, carrier-capable attack aircraft. It was developed from the AD-4 and added a widened fuselage and cockpit with a copilot next to the pilot, additional armor, and omitted the lateral dive brakes. Prior 1962, it was designated AD-5. |           |           |           |       |                                       |        |                    |     |     |                                                                                                                                                                                                                                                                                     |  |     |  |    |
| 2. From 1967, equipped with the Stanley rocket extraction device which gives a –1 modifier when bailing out.                                                                                                                                                                               |           |           |           |       |                                       |        |                    |     |     |                                                                                                                                                                                                                                                                                     |  |     |  |    |

| Notes:<br>1. The Douglas AD-6 Skyraider is a propeller-driven, carrier-capable attack aircraft. It was developed from the AD-5, but returned to the fuselage single-pilot cockpit configuration of the AD-4. In 1962, it was redesignated A-1H. |             |           |           |                     |                   |                    | 1–6 and 10–15 500 BB RK RP                                                                                                                                                                                                                                                          |        |     |                    |     |                                   |  |

Stations 1 to 6 and 10 to 15 are closely spaced and have restrictions: a station adjacent to one other loaded with a store of more than 250 lb may only carry a store of 250 lb or less and a station between two others loaded with stores of more than 250 lb may not be used. |        |     |                    |     |                                   |  |

| 1. The Douglas A-1H Skyraider is a propeller-driven, carrier-capable attack aircraft. It was developed from the AD-5, but returned to the fuselage and single-pilot cockpit configuration of the AD-4. Prior to 1962, it was designated AD-6. |             |           |           |                     |                   |                    |                                                                                                                                                                                                                                                                                                                                                                                                               |        |     |                    |                                   |     |  |
| 2. From 1967, equipped with the Stanley rocket extraction device which gives a –1 modifier when bailing out.                                                                                                                                  |             |           |           |                     |                   |                    | VPs: 8/5/3/1                                                                                                                                                                                                                                                                                                                                                                                                  |        |     |                    |                                   |     |  |

| 1. The Douglas AD-7 Skyraider is a propeller-driven, carrier-capable attack aircraft. It was developed from the AD-6. In 1962, it was redesignated A-1J. |             |           |           |           | 1. Stations 1 to 6 and 10 to 15 are closely spaced and have restrictions: a station adjacent to one other loaded with a store of more than 250 lb may only carry a store of 250 lb or less and a station between two others loaded with stores of more than 250 lb may not be used. |                    |                             |        |     |                                   |     |           |  |

## Lockheed P2V Neptune

The Lockheed P2V Neptune is a multiple-engined maritime patrol and anti-submarine aircraft. Early versions had two rotary engines, but later versions added two auxiliary jet engines. In 1962, it was redesignated as the P-2.

In 1954, Lockheed converted five P2V-7s into P2V-7U electronic intelligence (ELINT) aircraft for the CIA. Armament was removed and in its place a wide and variable range of ELINT equipment was installed.

There were nominally assigned to the USAF and designated RB-69A. From 1957 to 1959, they were used by CIA crews for missions in Europe. From 1957 to 1966, they were flown by ROCAF crews from the 34th "Black Bats" Squadron on ELINT missions over mainland China. Five were lost, with at least three being shot down.

The normal load for an RB-69A would be two 200 gal (760L) FTs on the wing tips. From 1964, AIM-9B IRMs could be carried, but the low speed of the aircraft reduced the chance of a successful launch.

An ADC is provided for the:

- P2V-7U
