## Republic F-84 Thunderjet

The Republic F-84 Thunderjet is an early escort fighter, fighter-bomber, and tactical nuclear bomber. It has unswept wings, a single jet engine, and an air intake in the nose.

The aircraft was designated P-48 during its development. The P-84B entered service in 1947; there was no P-84A version, as the XP-84A was a prototype and the YP-84A a service test version. It was armed with six .50 cal M3 machine guns, with four guns were installed in the nose and one in each wing root. It was equipped with an Allison J35-A-15 engine and, to improve its range, wing-tip fuel tanks with a capacity of 226 gal each. In 1948, the P-48 was redesignated as the F-84.

The F-84C followed shortly after the F-84B, and was almost identical. The main change being the use of the J35-A-13C engine, which had better reliability than the engine in the F-84B, but otherwise had almost identical performance. Both of these models suffered from structural damage to the fuselage skin, which lead to performance limitations, and structural failures in the wings, caused at least in part by the fuel tanks applying unexpected twisting loads to the wings during high-g maneuvers.

The first satisfactory version was the F-84D, which entered service in 1949. It had strengthened wings, triangular fins on the wing-tip tanks to mitigate twisting, and a more powerful J35-A-17D engine.

The F-84E entered service in 1950 and represented a further improvement on the F-84D. It has lengthened fuselage, further strengthened wings, added an A-1B gun sight with an APG-30 range-finding radar, and had provision for 230 gal fuel tanks on the under-wing stations. It kept the same engine as the F-84D. The F-84E could be equipped with air-to-air refueling probes on each wing-tip fuel tank, and these were used in combat in Korea to permit long-range missions to be flown from Japan.

The final F-84G version was intended to bridge the gap before the introduction of the swept-wing F-84F. It was equipped with an air-to-air refueling receptacle in its left wing (in addition to possible use of air-to-air refueling probes in the wing-tip fuel tanks, like the F-84E), a new framed canopy as the single-piece canopy of the F-84E was subject to failure, and could carry a Mk 7 nuclear bomb. The new canopy was subsequently refitted to previous versions.

In the Korean War, when the MiG-15 entered combat on 1 November 1950, the best fighter the USAF had in the theater was the straight-wing F-80C, and it was unable to match the swept-wing MiG. The response of the USAF, in retrospect, was curious; it sent a wing of quite similar

F-84Es. Starting in December 1950, these begin to escort daylight B-29 raids. It was found to be rugged and a stable gun platform, but like the F-80C was easily outmaneuvered by the faster MiG-15. The role of countering the MiG was given to the F-86, and the F-84 subsequently was used as a fighter-bomber and, towards the end of the war, night intruder. Starting in 1951, many F-80C units in Korea converted to the F-84.

In addition to the USAF, the F-84E was used by the air forces of Belgium, France, Netherlands, and Norway. The F-84G was used by these and also by the air forces of Denmark, Greece, Iran, Italy, Portugal, Republic of China, Thailand, Turkey, and Yugoslavia. Taiwanese F-84s engaged in air combat with PRC MiG-15 and MiG-17s during the Second Taiwan Strait Crisis in 1958. Portuguese F-84s saw combat in the Angolan War of Independence from 1961 as fighter-bombers.

| 1. The McDonnell F2H-2B Banshee is a carrier-capable fighter-bomber and tactical nuclear bomber. It is a development of the F2H-2 with provision for a nuclear bomb on its port inner-wing weapon station.<br>2. High transonic drag (HTD). |             |           |                |                 |             | 1. The wing-tip stations 1 and 10 usually carry 200 gal (700L) FTs. They cannot be jettisoned in flight.                                                       |                |                              |       |                          |     |     |  |
|                                                                                                                                                                                                                                             |             |           |                |                 |             | 2. Stations 4 and 5 and stations 6 and 7 are closely spaced. If a 500 lb bomb is carried on station 5 or 6, the adjacent station cannot be used.               |                |                              |       |                          |     |     |  |
|                                                                                                                                                                                                                                             |             |           |                |                 |             | 3. As an exception to the normal loading rules, a Mk 7 (weight 1700 and load 3.5) or Mk 8 (weight 3300 and load 5.0) nuclear bomb can be carried on station 5. |                |                              |       |                          |     |     |  |

| Notes:<br>1. The McDonnell F2H-2B Banshee is a carrier-capable fighter-bomber and tactical nuclear bomber. It is a development of the F2H-2 with provision for a nuclear bomb on its port inner-wing weapon station. This variant has an air-to-air refueling probe fitted in place of the upper starboard cannon.<br>2. High transonic drag (HTD). |             |           |           |                     | Load Notes:                                                                                                                                                    |                    |                              |        |     |                    |     |     |  |
|                                                                                                                                                                                                                                                                                                                                                     |             |           |           |                     | 1. The wing-tip stations 1 and 10 usually carry 200 gal (700L) FTs. They cannot be jettisoned in flight.                                                       |                    |                              |        |     |                    |     |     |  |
|                                                                                                                                                                                                                                                                                                                                                     |             |           |           |                     | 2. Stations 4 and 5 and stations 6 and 7 are closely spaced. If a 500 lb bomb is carried on station 5 or 6, the adjacent station cannot be used.               |                    |                              |        |     |                    |     |     |  |
|                                                                                                                                                                                                                                                                                                                                                     |             |           |           |                     | 3. As an exception to the normal loading rules, a Mk 7 (weight 1700 and load 3.5) or Mk 8 (weight 3300 and load 5.0) nuclear bomb can be carried on station 5. |                    |                              |        |     |                    |     |     |  |

| 1. The McDonnell F2H-3 Banshee is a carrier-capable all-weather interceptor, fighter-bomber, and tactical nuclear bomber. It is a major development of the F2H-2 with a lengthened fuselage, increased fuel capacity, additional weapon stations, and the APQ-41 search radar. This variant has an air-to-air refueling probe fitted in place of the upper port cannon. |           |  |           |  |                                        |                |            |  |           |                                               |            |  |           |  |             |  |  |  |  | 1. The wing-tip stations 1 and 10 usually carry 170 gal (600L) FTs. They cannot be jettisoned in flight.                                                       |  |  |  |  |  |  |  |  |  |
| 2. High transonic drag (HTD).                                                                                                                                                                                                                                                                                                                                           |           |  |           |  |                                        |                |            |  |           |                                               |            |  |           |  |             |  |  |  |  | 2. Stations 4 and 5 and stations 6 and 7 are closely spaced. If a 500 lb bomb is carried on station 5 or 6, the adjacent station cannot be used.               |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                         |           |  |           |  |                                        |                |            |  |           |                                               |            |  |           |  |             |  |  |  |  | 3. As an exception to the normal loading rules, a Mk 7 (weight 1700 and load 3.5) or Mk 8 (weight 3300 and load 5.0) nuclear bomb can be carried on station 6. |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                         |           |  |           |  |                                        |                |            |  |           |                                               |            |  |           |  |             |  |  |  |  | 4. From 1958, may use AIM-9B IRMs.                                                                                                                             |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                                                                                                         |           |  |           |  |                                        |                |            |  |           |                                               |            |  |           |  |             |  |  |  |  | VPs: 11/7/4/2                                                                                                                                                  |  |  |  |  |  |  |  |  |  |

| <b>Notes:</b><br>1. The McDonnell F2H-3 Banshee is a carrier-capable all-weather interceptor, fighter-bomber, and tactical nuclear bomber. It is a major development of the F2H-2 with a lengthened fuselage, increased fuel capacity, additional weapon stations, and the APQ-41 search radar. This variant is modified for service in the RCN. In particular, AIM-9B IRMs can be carried on the outer stations 2 and 9, wing-tip FTs are rarely used, and neither air-to-air refueling nor nuclear weapons are available.<br>2. High transonic drag (HTD). |                                                                                                      | <b>Load Notes:</b><br>1. The wing-tip stations 1 and 10 can carry 170 gal (600L) FTs, but these are rarely used. They cannot be jettisoned in flight.<br>2. Stations 4 and 5 and stations 6 and 7 are closely spaced. If a 500 lb bomb is carried on station 5 or 6, the adjacent station cannot be used.<br>3. May use AIM-9B IRMs.                                                                                  |         |       |               |          |       |    |         |     |           |         |     |       |         |     |    |         |     |    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                      | <b>VPs:</b> 11/7/4/2                                                                                                                                                                                                                                                                                                                                                                                                  |         |       |               |          |       |    |         |     |           |         |     |       |         |     |    |         |     |    |

| 1. The McDonnell F2H-3 Banshee is a carrier-capable all-weather interceptor, fighter-bomber, and tactical nuclear bomber. It is a development of the F2H-3 with the APG-37 search radar and more powerful engines. This variant has an ATA refueling probe fitted in place of the upper port cannon.<br>2. High transonic drag (HTD). |       |           |     |           |                                        |           |     |       |    |                                     |     | 1. The wing-tip stations 1 and 10 usually carry 170 gal (600L) FTs. They cannot be jettisoned in flight.<br>2. Stations 4 and 5 and stations 6 and 7 are closely spaced. If a 500 lb bomb is carried on station 5 or 6, the adjacent station cannot be used.<br>3. As an exception to the normal loading rules, a Mk 7 (weight 1700 and load 3.5) or Mk 8 (weight 3300 and load 5.0) nuclear bomb can be carried on station 6.<br>4. From 1958, may use AIM-9B IRMs. |     |    |     |     |  |  |  |

| <b>Notes:</b><br>1. The B-50A is a propeller-driven strategic bomber. The version described here is a conventional bomber. It is a development of the B-29 and was originally designated B-29D. All B-50A conventional bombers were converted to “Saddletree” nuclear bombers immediately upon delivery.<br>2. Flight Restrictions. VD, VC, and unloading are forbidden.<br>3. Articulated Guns. The guns can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size and a –1 modifier when firing into the 60– arc. |                                                                                                       | <table border="1"> <thead> <tr> <th>Station</th> <th>Limit</th> <th>Allowed Loads</th> </tr> </thead> <tbody> <tr> <td>1 and 4</td> <td>4,500</td> <td>BB DR TR WR FT</td> </tr> <tr> <td>2 and 3</td> <td>10,000</td> <td>BB FT</td> </tr> </tbody> </table> <b>Load Notes:</b><br>1. Stations 2 and 3 are the forward and rear internal bomb bays. Each can carry up to (a) two 4,000 lb bombs, (b) four 2,000 lb bombs, (c) six 1,000 lb bombs, (d) twenty 500 lb bombs. All bombs must be the same type and low-drag. Station 3 may alternatively carry a special 2200 gal (8300L) FT.<br>2. Stations 1 and 4 may each carry a special 700 gal (2600L) FT.<br>3. As an exception to the normal rules, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 1250 fuel points (25 load points). | Station | Limit | Allowed Loads | 1 and 4 | 4,500 | BB DR TR WR FT | 2 and 3 | 10,000 | BB FT |

| <b>Notes:</b><br>1. The B-50A is a propeller-driven strategic bomber. This variant is a nuclear bomber converted from the conventional variant under the 1947 to 1949 Saddletree program, and has provision for nuclear weapons, all armor and turrets removed, air-to-air refueling, additional fuel tanks, and winterized electronics.<br>2. Flight Restrictions. VD, VC, and unloading are forbidden.<br>3. Articulated Guns. The guns can only fire at targets in the 60– arc. They may return fire twice per game turn in response to gun attacks or conduct one attack. The hit rolls are modified only by the target size. |                                                                                                       | <b>Load Notes:</b><br>1. Station 2 is the forward bomb bay. It can carry a Mark 4 (weight 11,000), Mark 5 (weight 3,000), or Mark 6 (weight 8,000) nuclear bomb.<br>2. Station 3 is the rear bomb bay. It permanently carries a special 2200 gal (8300L) FT.<br>3. Stations 1 and 4 may each carry a special 700 gal (2600L) FT.<br>4. As an exception to the normal rules, internal loads contribute 1 load point for each 1,000 of weight and internal fuel contributes 1 load point for each 50 fuel points. A return mission will typically require leaving the target with at least 1250 fuel points (25 load points). |         |       |               |         |       |    |   |        |     |   |        |    |
| <b>VPs:</b> 28/19/9/5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                       | v2.0000000<br>0000-00-00T00:00:00                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |         |       |               |         |       |    |   |        |     |   |        |    |

| <b>Notes:</b><br>1. The Boeing B-50D Superfortress is a propeller-driven strategic bomber. The version described here is a conventional bomber. It a development of the B-50A/B and has increased fuel capacity.<br>2. Flight Restrictions. VD, VC, and unloading are forbidden.<br>3. Articulated Guns. The guns can fire in any direction. They may return fire twice per game turn in response to gun attacks or conduct one attack.The hit rolls are modified only by the target size and a –1 modifier when firing into the 60– arc. |                     |                    |         | 1. Stations 2 and 3 are the forward and rear internal bomb bays. Each can carry up to (a) two 4,000 lb bombs, (b) four 2,000 lb bombs, (c) six 1,000 lb bombs, (d) twenty 500 lb bombs. All bombs must be the same type and low-drag. Station 3 may alternatively carry a special 2200 gal (8300L) FT. |              |                      |

| 1. The Grumman F9F-2B Panther is a carrier-capable day fighter and fighter-bomber. This version is a development of the F9F-2 version and has additional stations on the wing root and can carry both bombs and HVARs. All F9F-2 aircraft were converted to this standard, and subsequently commonly referred to as the F9F-2 rather than the F9F-2B. |             |           |                |           |                                           |                    |     |                                                                |     |                    |     |     |   |  |

## North American F-86 Sabre

The North American F-86 Sabre is a single-engined fighter, interceptor, fighter-bomber, and tactical nuclear bomber, and was the first swept-wing aircraft to enter service in the USAF. There are many versions and variants of the F-86, and we discuss here first the fighters and fighter-bombers (F-86A/E/F/H) and then the interceptors (F-86D/K/L).<sup>1</sup>

### Fighter Versions

#### F-86A

The F-86A has a swept wing and a swept tail with conventional control surfaces. It is powered by a J47-GE-7 engine with 5340 lb of dry thrust; only the interceptor versions of the F-86 had afterburners. It is armed with six .50 cal M3 machine guns and the view from the cockpit is excellent.<sup>2</sup>

Like many of its contemporaries, it suffers from a very short range on internal fuel, and relied on a pair of either 120-gallon or 206-gallon fuel tanks on under-wing stations to achieve a useful range. However, the 206-gallon tank limits maneuvers to 3G and so can only be used for ferry flights. Instead of fuel tanks, it can carry two bombs of up to 1000 lb or sixteen 5-inch HVAR rockets, but has a very restricted combat range while doing so, and therefore served essentially as a day fighter rather than a fighter bomber.

It entered service with the USAF in March 1949. It was rushed to Korea to counter Soviet MiG-15s, which were outclassing the straight-wing F-80C fighters already in theater, and saw combat starting in December 1950.

#### F-86E

The F-86E improves on the F-86A by having a slightly more powerful J47-GE-13 engine with 5450 lb of dry

thrust, the A-1CM radar-ranging gunsight, and an all-flying tail. The new tail significantly improves the handling compared to the F-86A at high transonic speeds.<sup>3</sup>

The F-86E entered service in February 1951 and arrived in Korea in July 1951.

#### F-86F-1/5/10/15/20

The F-86F series introduces a series of significant improvements over earlier models. All F-86F variants are powered by the J47-GE-27 engine, producing 5970 lb of dry thrust.<sup>4</sup>

The initial F-1 block otherwise closely resembles the F-86E. It entered service in April 1952 and arrived in Korea by June 1952.<sup>5</sup>

The F-5 block adds the improved A-4 gunsight.<sup>6</sup>

The F-10, F-15, and F-20 blocks permit the use of 200 US gallon fuel tanks without maneuver restrictions, greatly enhancing operational range for day-fighter missions. These blocks entered service starting in June 1952.<sup>7</sup>

#### F-86F-2

The F-2 "GUNVAL" are experimental aircraft converted from E and F-1 aircraft. They have their .50-cal guns replaced with four T-160 20-mm guns each with 100 rounds. This is a revolved cannon with a rate of fire of 1400 rounds per minute, much greater than the 720 rounds per minute of the conventional Navy M3 and Air Force M24 guns. All had the 6-3 wing.<sup>8</sup>

The GUNVAL Sabres saw combat in Korea from December 1952 to April 1953. The weapons were effective, but the aircraft suffered from compressor stalls due to ingestion of gun fumes when the guns were used at high altitude.

#### F-86F-25/30/35

The F-25 and F-30 blocks hugely improve the capability of the F-86 as a fighter bomber. They have a second pair of weapon pylons on the inner wing, allowing the aircraft to carry both a pair of bombs or eight HVAR rockets in addition to a pair of fuel tanks. This configuration provides a much improved range when carrying air-to-ground weapons. The F-25 models entered service in Korea in October 1952.<sup>9</sup>

The F-35 block is specialized as a tactical nuclear bomber, with a strengthened the left inner pylon to permit carriage of the second-generation Mk 12 nuclear bomb and the LABS (Low Altitude Bombing System) to allow toss bomb-

ing. It entered service in January 1954 and was based mainly in Europe.<sup>10</sup>

All the versions mentioned up to this point were built with the basic wing, which had automatic leading-edge slats that increased lift at low speed. In the summer of 1952, North American developed the “6-3 wing” or the “solid 6-3 wing”, which features a 6-inch extension to the chord at the wing root and a 3-inch extension at the wing tip. The resulting larger area gives much better maneuverability at high altitude. The loss of the automatic slats increased the landing speed and the landing roll, and led to accidents when used by inadequately-trained pilots. Starting in September 1952, field-modification kits were provided to add the 6-3 wing to existing F models and later-production F-25/30/35 had them installed in the factory.<sup>11</sup>

### **F-86F-40**

The F-86F-40 was initially a version to be manufactured for the JASDF by Mitsubishi under license, but was also built by North American for the USAF and other US allies. It is similar to the F-25, but features a new wing with 12-inch span extensions at the wing-tips and once more automatic leading-edge slats. As such, it combined the superior high-altitude maneuverability of the 6-3 wing with the lower landing speeds of the basic wing; it was known as the “extended 6-3 wing” or just the “F-40 wing”. Deliveries to the USAF and US allies under the MAP (Military Assistance Program) started in 1955. Many earlier F-series aircraft were upgraded to the F-40 standard.<sup>12</sup>

### **F-86H**

The F-86H further refines the F-86 as a fighter-bomber. It has a more powerful, albeit heavier, J73-GE-3 engine producing 8900 lb of dry thrust and giving a much improved rate of climb. Many were later upgraded with the extended 6-3 wing.<sup>13</sup>

The initial H-1 block maintains the armament of six 0.50-cal machine guns, but the later H-5/10 blocks have four 20 mm M39 guns each with 150 rounds, finally giving the Sabre a potent air-to-air armament, albeit in a model not intended as a fighter.

The F-86H entered service in 1954.

## **Interceptor Versions**

The interceptor F-86D/K/L versions of the F-86 are significantly different to the F-86A/E/F/H versions, sharing wings and tail but little else. Informally, they were known as the “Sabre Dog”.

### **F-86D**

The F-86D has the J47-GE-17 engine with 5500 lb of dry thrust and an afterburner giving 7650 lb; the afterburner was vital to allow the aircraft to quickly climb to the high altitudes at which it was expected to intercept intruding bombers. The larger fuselage allows more internal fuel, but despite this the F-86D and subsequent interceptors almost always flew with two 120-gallon fuel tanks on wing stations. The F-86D has the basic wing and all-flying tail of the F-86E.<sup>14</sup>

Its weapon system consisted of an APG-7 radar, twenty-four 70 mm FFAR rockets in an extending ventral tray, and a Hughes E-4 fire-control system linking the two. The combination permitted collision-course rocket attacks from the beam, but presented a heavy workload for the single pilot.

Early variants of the aircraft began to be delivered in March 1951, but versions with the E-4 fire control system were only delivered starting in July 1952.

### **F-86K**

The F-86K is a simplified interceptor developed from F-86D for export under the Military Assistance Program (MAP). The weapon system was reworked, with four 20 mm M24 guns replacing the FFARs and a Hughes MG-4 fire-control system replacing the more advanced E-4 system. The simpler fire-control system no longer had collision-course attacks was capable of tail-chase attacks. Some F-86Ks have the extended 6-3 wing of the F-40, either as late-production builds or as upgrades.<sup>15</sup>

Many F-86Ks for European air forces were assembled by Fiat from kits provided by North American; others were built by North American itself.

The F-86K served with the air forces of Italy, Netherlands, and Germany, with deliveries between 1955 and 1958.

### **F-86L**

The F-86L is a rebuild of the F-86D. It has the extended 6-3 wing and updated electronics, including a data link to allow the intercepts to be directly guided by the computerized SAGE system.<sup>16</sup>

The F-86L entered service in late 1957.

## **Armament and Stores**

### **Guns**

The F-86A/E/F/H-1 are armed with six M3 .50-cal machine guns with 300 rounds per gun.<sup>17</sup>

## Fuel Tanks

The F-86A/E/F-1 can use 120-gallon (450L) fuel tanks without maneuver restrictions, but 200-gallon (760L) fuel tanks limited maneuverability to 3G and were only used for ferry flights.

The F-86F-5/10/15/20/25/35/40 and F-86H can carry either 120-gallon (450L) fuel tanks or 200-gallon fuel tanks on the outer-wing without maneuver restrictions. Those with dual-store wings can also carry 120-gallon (450L) fuel tanks on the inner-wing stations.

The F-86D/K/L can only use 120-gallon (450L) fuel tanks.<sup>18</sup>

## Bombs

All the fighter-bomber versions can carry two bombs of up to 1,000 lb. Early options include the M65 1,000-lb, M64 500-lb, and M57 250-lb HE bombs as well as the BLU-1750-lb napalm bomb. Later options include the BLU-27 750-lb napalm bomb, the M117 750-lb HE bomb, the Mk-83 1,000-lb HE bomb, and the Mk-82 500-lb HE bomb.<sup>19</sup>

The F-86A/E/F-1/5/10/15/20 have “single-store” wings with only two stations and cannot carry both bombs and fuel tanks. When carrying bombs, their combat radius is only 50 miles or 80 kilometers. Effectively, these versions are not useful as fighter-bombers.

On the other hand, the F-86F-25/30/35/40 and F-86H have “dual-store” wings and can carry bombs on the inner stations and fuel tanks on the outer stations.

The nuclear-capable F-86F-35 and F-86H versions can carry a 1,200-lb Mk 12 nuclear bomb on their left inner station and a 120-gallon fuel tank on the corresponding right station.<sup>20</sup>

## Rockets

All the fighter-bomber versions can carry HVAR rockets, but the arrangement changes from model to model. The common thread is that each rail can carry two HVARs, one below the other.

The F-86A/E/F-1/5/10/15/20 can carry sixteen HVARs on eight rails in place of other stores. This is not a very practical arrangement, since it precludes carrying external fuel tanks and so the combat range is very short.

The F-86F-25/30/35/40 can either use the inner-wing and outer-wing stations, or replace the inner-wing stations with four rails, or replace all stations with eight rails. Thus, it can either carry sixteen HVARs without fuel tanks or eight with fuel tanks.

The F-86H has a different arrangement. It has four rails, two on each wing, between the inner-wing and outer-wing

stations. If the inner stations are empty, all four rails may each carry two HVARs. If the inner stations are carrying 1000 lb or lighter bombs, the outer pair of rails may each carry a single HVAR.<sup>21</sup>

Starting in 1958, some F-86D/K/L aircraft were retrofitted with two missile stations inboard of the fuel tanks for the Sidewinder missile. This upgrade enhanced their air-to-air combat capability, particularly against more maneuverable or heavily armed adversaries.

- F-86A.** ADC adapted from Webster. Curtis (pp. 22-23) states that radar ranging was also installed on the last 25 As, but I’ve not added this variant. Service from Curtis (p. 19).
- F-86E.** ADC adapted from Webster. J47-GE-13 engine with 5450 lb thrust (Curtis, p. 62). All-flying tail (Curtis, p. 61). Service from Curtis (p. 63).  
**Radar Ranging.** Webster adds radar-ranging in the F, but Baughter and Curtis (p. 62) state the APG-30 was standard in the E. I have added radar-ranging to the ADC for the E.
- F-86F.** ADC adapted from Webster. J47-GE-27 with 5970 lb thrust (Curtis, p. 69).
- F-86F-1.** ADC adapted from Webster. Curtis (pp. 69–73).
- F-86F-5.** ADC adapted from Webster. Goebel and Curtis (p. 72) state that the F-5 could carry 200-gallon FTs (each 1400 lb) on its wing stations. These are only rated for 1000 lb in the ADC from Webster. The station loads need increasing to 1400 lb each and the total load to 2800 lb.
- F-86F-10/15/20.** ADC originally from Webster. The F-5/F-10/F-15/F-20 are similar (Curtis, p. 71). Many early aircraft converted to 6-3 wing starting in September 1952 (Curtis p. 73). Since the F-25/30 was not produced until October 1952, these must have been F-20s and earlier.
- F-86F-2 GUNVAL.** See Meldrum and Curtis (pp. 84–87).  
Meldrum suggests gun values of 6/4/3 (5/7\*) to match the F-100A in TSOH. Webster gives the same numbers for the F-86H. 100 rounds at 1400 rounds per minute corresponds to 2.0 ammunition points.  
After the initial modifications (sealing the doors into the intake and cutting holes in the gun bay doors), there were 41 engagements before another flame-out. This suggests the probability of a flame-out is about 1/100.
- F-86F-25/30.** ADC adapted from Webster. Early F-25 had the original wing, but later production had 6-3 wing (Curtis p. 73). Many early

aircraft were converted to 6-3 wing starting in September 1952 (Curtis p. 73). The F-30 was identical to the F-25, but built at Inglewood rather than Columbus (Curtis, p. 72).

- F-86F-35.** ADC adapted from Webster. The F-35 could carry a Mk 12 nuclear bomb on its port wing and drop tanks on its starboard wing (Goebel and Curtis, p. 82). I assumed the Mk 12 has a weight of 1200 lb and 3.0 load points.
- 6-3 Wing.** Many early aircraft were converted to 6-3 wing starting in September 1952 (Curtis p. 73). Since the F-25/30 was not produced until October 1952, these must have been F-20s and earlier.

Webster writes about the 6-3 wing on the F-25:

“On the data card, this is reflected by reducing the minimum allowed speed at higher altitudes rather than reducing the decel for turning, since the next-lowest gameable decel amount is 0.5, which would skew the data card’s power-to-decel relationship too far from reality compared to the other cards. One last thing about the 6-3 wing is that the Sabre’s low-speed handling characteristics were degraded, but this applied to the landing regime and is not reflected in game terms. Adequately trained pilots had no problems with it.”

The field conversions were modifications of the wing leading edge, and so would have maintained the same configuration of load stations.

- F-86F-40.** ADC adapted from Webster. The F-40 had the 6-3 wing with automatic slats and 12-inch wing-tip extensions (Curtis, p. 83). Deliveries started in 1955 (Curtis, p. 83). Many earlier F models brought up to F-40 standard before being supplied to other countries through MAP (Curtis., p. 83).
- F-86H.** ADC originally from Webster. This variant has the 6-3 wing. Used GE J73, which was heavier but more powerful (8900 lb) (Curtis, p. 92). Entered service in 1954 (Curtis, p. 94). Versions with the extended 6-3 wing were produced in 1955, and many earlier H models also converted (Curtis, p. 95).
- F-86D.** ADC adapted from Webster.
- F-86K.** ADC originally from Webster. Similar to the F-86D (Curtis, p. 103–104), so presumably also with the original wing. Delivered to Italian AF in 1955 (Curtis, p. 105). Deliveries to Italy, Netherlands, and Germany completed in 1958. Last 45 has the extended 6-3 wing (Curtis, p. 105).
- F-86L.** ADC originally from Webster. Has extended 6-3 wing (Curtis, p. 56).
- Guns.**
  - F-86A/E/F/H-1 with six M3 .50-cal guns with 300 rounds per gun (Curtis p. 22 and p. 92). At 800 rounds per minutes, this corresponds to 11 ammunition points.
  - F-86H-5/10 with four M39 20-mm guns and 150 rounds per gun (F-86H Flight Manual). At 1500 rounds per minute, this corresponds to 3.0 ammunition points.  
The combined rate of fire is equal to the M61 and the muzzle velocity is similar, so I increase the rolls and ratings given by Webster of 6/4/3 (5/7\*) to 7/5/3 (6/8\*) to match the M61 in the F-104A.  
On some F-86H models, either the upper two or all four guns can be selected (F-86H Flight Manual). For this, I give rolls and ratings of 6/4/2 (5/6\*) to match four 20 mm Hispano V or M3 guns, which have a similar rate of fire.
  - F-86K with four M24A1 20-mm guns with 132 rounds per gun (Wikipedia). At 720 rounds per minute, this corresponds to 5.5 ammunition points. For this, I give rolls and ratings of 6/4/2 (5/6\*) to match four 20 mm Hispano V or M3 guns, which have a similar rate of fire.

**18. Fuel Tanks.**

- F-86A could use 120-gallon (450L) FTs (Curtis, p. 36)
- F-86A could use 206-gallon (772L) FTs for ferry missions (Curtis, p. 18-19). These tanks could be dropped, but limited the aircraft to 3G (F-86A Flight Manual, p. 126).
- F-86D could use two 120-gallon FTs (Curtis, p. 41)
- F-86D-25 first model with “jettisonable drop tanks” (Curtis, p. 49). I presume this means earlier models could use external FTs but not jettison them. The “definitive” version was the D-45 (Curtis, p. 50).
- F-86F-5 was the first Sabre to be able to use the 200-gallon (760L and 1380 lb) FT (Curtis, p. 71).
- The new pylon on the F-86F were inboard of the existing pylons for 120-gallon FT or 1000-lb BB (Curtis, p. 72).
- F-86F-35 could carry Mk 12 20-kt nuclear bomb on inner left pylon and a FT on the other side (Curtis, p. 82).
- F-86H could also carry 1200-lb Mk 12 nuclear bomb (Curtis, p. 93)
- F-86L can carry only 120-gallon FTs (SAC from 1958)

19. **Bombs.** The list of bombs is from the F-86A/F/H flight manuals.

20. **Nuclear Bombs.** See Curtis (p. 82 and p. 93).

21. **Rockets.** The F-86A/E/F-1/5/10/15/20 could carry sixteen HVARs in place of other stores (F-86A Flight Manual p. ). The F-86F-25/30/35/40 (F-86F Flight Manual p. 4-38) could carry four in place of the inner stores. The F-86H (F-86H Flight Manual, p. 5-4 and 5-6) has four rails for HVARs, two on each wing between the inner and outer stations. All four rails can each carry two HVARs if the inner station is unloaded, but also the outer rocket rails can each carry one HVAR provided inner stations carry 1000 lb or lighter bombs.

| <b>Notes:</b><br>1. The North America F-86D Sabre-Dog is a single-engined, swept-wing all-weather interceptor. The F-86D is a extensively modification of the F-86A. The F-86D has the early slatted wing and an all-flying tail (which appears on all subsequent derived versions). It is armed with 24 FFARs in a ventral tray. The APG-36 radar and Hughes E-4 fire-control system allow collision-course rocket attacks.<br>2. High transonic drag (HTD). |                                                                                      | <b>Load Notes:</b><br>1. Stations must be loaded symmetrically.<br>2. May use 120 gal (450L) FTs.<br>3. From 1958, may use AIM-9B IRMs.<br>4. Station 3 is an internal rocket tray with 2 factors of air-to-air rockets.                                                                |         |       |               |         |       |    |         |     |     |   |   |  |

| <b>Notes:</b><br>1. The North American F-86F Sabre is a single-engined, swept-wing, day fighter. The F-86F-5 is derived from the F-86E, and gains a more powerful engine and a better combat range as they can carry the larger 200 gal fuel tank in combat. This variant is the original with the early slatted wing.<br>2. High transonic drag (HTD). |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |         |       |               |         |       |       |              |     |    |

| 1. The North American F-86F-10 Sabre is a single-engined, swept-wing, fighter-bomber. The F-86F-10 is derived from the F-86F-5, but has the improved A-4 gunsight. The F-86F-15/20 are similar. This variant is the original, with the early slatted wing. |  |           |  |           |                                                                |                    |         |       |         | 1. Either stations 1 and 2 or 3 to 10 may be used.   |  |        |  |        |  |     |  |  |  |
| 2. High transonic drag (HTD).                                                                                                                                                                                                                              |  |           |  |           |                                                                |                    |         |       |         | 2. Stations must be loaded symmetrically.            |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                            |  |           |  |           |                                                                |                    |         |       |         | 3. May use 120 gal (450L) or 200 gal (760L) FTs.     |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                            |  |           |  |           |                                                                |                    |         |       |         | 4. May use two HVAR RKs on each of stations 3 to 10. |  |        |  |        |  |     |  |  |  |

| Notes:<br>1. The North American F-86F-10 Sabre is a single-engined, swept-wing, fighter-bomber. The F-86F-10 is derived from the F-86F-5, but has the improved A-4 gunsight. The F-86F-15/20 are similar. This variant is modified with the unslatted 6-3 wing, which gives better maneuverability at altitude but raises the landing and stall speed. |             |           |      |           |                                        |           |    |                    |  | 1. Either stations 1 and 2 or 3 to 10 may be used.   |  |                                    |  |           |  |     |  |  |  |  |  |

| <b>Notes:</b><br>1. The North American F-86F-25 Sabre is a single-engined, swept-wing, fighter-bomber. The F-86F-25 is derived from the F-86F-15/20, but has a second pair of weapon stations on the inner wing, allowing the aircraft to carry bombs or rockets in addition to a pair of 200 gal fuel tanks and giving it for the first time a useful range when used as a fighter-bomber. The F-86F-30 is similar. This variant is the original, with the early slatted wing.<br>2. High transonic drag (HTD). |                                                                                      | <b>Load Notes:</b><br>1. Either stations 1 to 4, or stations 1, 4, and 7 to 10, or stations 5 to 12 may be used.<br>2. Stations must be loaded symmetrically.<br>3. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3.<br>4. May use two HVAR RKs on each of stations 5 to 12.<br>5. From 1958, may use AIM-9B IRMs.              |         |       |               |         |       |    |         |       |           |               |     |    |              |     |    |

| <b>Notes:</b><br>1. The North American F-86F-25 Sabre is a single-engined, swept-wing, fighter-bomber. The F-86F-25 is derived from the F-86F-15/20, but has a second pair of weapon stations on the inner wing, allowing the aircraft to carry bombs or rockets in addition to a pair of 200 gal fuel tanks and giving it for the first time a useful range when used as a fighter-bomber. The F-86F-30 is similar. This variant is a late-production or modified aircraft with the unslatted 6-3 wing, which gives better maneuverability at altitude but raises the landing and stall speed. |                                                                                                      | <b>Load Notes:</b><br>1. Either stations 1 to 4, or stations 1, 4, and 7 to 10, or stations 5 to 12 may be used.<br>2. Stations must be loaded symmetrically.<br>3. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3.<br>4. May use two HVAR RKs on each of stations 5 to 12.<br>5. From 1958, may use AIM-9B IRMs.              |         |       |               |         |       |    |         |       |           |               |     |    |              |     |

| <b>Notes:</b><br>1. The North American F-86F-35 Sabre is a single-engined, swept-wing, fighter-bomber, and tactical nuclear bomber. The F-86F-35 is similar to the F-86F-25 but the inner left weapon station is reinforced to allow carriage of a Mk 12 nuclear bomb and the aircraft is equipped with the LABS system to allow toss bombing. This variant is the original, with the early slatted wing.<br>2. High transonic drag (HTD). |                                                                                                      | <b>Load Notes:</b><br>1. Either stations 1 to 4, or stations 1, 4, and 7 to 10, or stations 5 to 12 may be used.<br>2. Stations must be loaded symmetrically, with the exception that a Mk 12 nuclear bomb (weight 1200 lb and load 3.0) may be carried on station 3 (left) with a 120 gal (450L) FT on station 2 (right).<br>3. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3.<br>4. May use two HVAR RKs on each of stations 5 to 12.<br>5. From 1958, may use AIM-9B IRMs. |         |       |               |         |       |    |   |       |           |   |       |           |               |     |    |              |     |    |

| <b>Notes:</b><br>1. The North American F-86F-35 Sabre is a single-engined, swept-wing, fighter-bomber, and tactical nuclear bomber. The F-86F-35 is similar to the F-86F-25 but the inner left weapon station is reinforced to allow carriage of a Mk 12 nuclear bomb and the aircraft is equipped with the LABS system to allow toss bombing. This variant is fitted with the unsalted 6-3 wing, which gives better maneuverability at altitude but raises the landing and stall speed. |                                                                                                      | <b>Load Notes:</b><br>1. Either stations 1 to 4, or stations 1, 4, and 7 to 10, or stations 5 to 12 may be used.<br>2. Stations must be loaded symmetrically, with the exception that a Mk 12 nuclear bomb (weight 1200 lb and load 3.0) may be carried on station 3 (left) with a 120 gal (450L) FT on station 2 (right).<br>3. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3.<br>4. May use two HVAR RKs on each of stations 5 to 12.<br>5. From 1958, may use AIM-9B IRMs. |         |       |               |         |       |    |   |       |           |   |       |           |               |     |    |              |     |    |

| 1. The North American F-86F-40 Sabre is a single-engined, swept-wing, fighter-bomber. The F-86F-40 is derived from and is similar to the F-86F-25, but has the slatted, extended 6-3 wing, which gives better maneuverability at altitude and lowers the landing and stall speed. |  |           |  |           |                                        |           |                    |       |  | 1. Either stations 1 to 4, or stations 1, 4, and 7 to 10, or stations 5 to 12 may be used.    |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                   |  |           |  |           |                                        |           |                    |       |  | 2. Stations must be loaded symmetrically.                                                     |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                   |  |           |  |           |                                        |           |                    |       |  | 3. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3. |  |        |  |        |  |     |  |  |  |
|                                                                                                                                                                                                                                                                                   |  |           |  |           |                                        |           |                    |       |  | 4. May use two HVAR RKs on each of stations 5 to 12.                                          |  |        |  |        |  |     |  |  |  |

| 1. The North American F-86H Sabre is a single-engined, swept-wing, fighter-bomber. The F-86H is derived from the F-86F-35, but has a more powerful engine and four 20 mm M39 guns in place of the original six .50 cal guns. This variant is the original with the unslatted 6-3 wing. |  |       |  |           |                                      |                    |     |           |     |                    |  |        |  |        | 1. Stations must be loaded symmetrically, with the exception that a Mk 12 nuclear bomb (weight 1200 lb and load 3.0) may be carried on station 5 (left) with a 120 gal (450L) FT on station 4 (right). |     |  |  |  |                          |  |  |  |  |  |  |  |  |  |
| 2. May use only the upper two guns with hit rolls of 6/4/2 and damage ratings of 5/6*.                                                                                                                                                                                                 |  |       |  |           |                                      |                    |     |           |     |                    |  |        |  |        | 2. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3.                                                                                                          |     |  |  |  |                          |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                        |  |       |  |           |                                      |                    |     |           |     |                    |  |        |  |        | 3. May use two HVAR RKs on each of stations 2, 3, 6, and 7 if stations 4 and 5 are unloaded.                                                                                                           |     |  |  |  |                          |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                        |  |       |  |           |                                      |                    |     |           |     |                    |  |        |  |        | 4. May use one HVAR on each of stations 2 and 7 if stations 4 and 4 are carrying 1000 lb or lighter bombs.                                                                                             |     |  |  |  |                          |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                        |  |       |  |           |                                      |                    |     |           |     |                    |  |        |  |        | 5. From 1958, may use AIM-9B IRMs.                                                                                                                                                                     |     |  |  |  |                          |  |  |  |  |  |  |  |  |  |
|                                                                                                                                                                                                                                                                                        |  |       |  |           |                                      |                    |     |           |     |                    |  |        |  |        |                                                                                                                                                                                                        |     |  |  |  |                          |  |  |  |  |  |  |  |  |  |

| <b>Notes:</b><br>1. The North American F-86H Sabre is a single-engined, swept-wing, fighter-bomber. The F-86H is derived from the F-86F-35, but has a more powerful engine and four 20 mm M39 guns in place of the original six .50 cal guns. This variant is refitted with the slatted, extended 6-3 wing.<br>2. May use only the upper two guns with hit rolls of 6/4/2 and damage ratings of 5/6*. |                                                                                                      | <b>Load Notes:</b><br>1. Stations must be loaded symmetrically, with the exception that a Mk 12 nuclear bomb (weight 1200 lb and load 3.0) may be carried on station 5 (left) with a 120 gal (450L) FT on station 4 (right).<br>2. May use 200 gal (760L) FTs on stations 1 and 4 and 120 gal (450L) FTs on stations 2 and 3.<br>3. May use two HVAR RKs on each of stations 2, 3, 6, and 7 if stations 4 and 5 are unloaded.<br>4. May use one HVAR on each of stations 2 and 7 if stations 4 and 4 are carrying 1000 lb or lighter bombs.<br>5. From 1958, may use AIM-9B IRMs. |         |       |               |         |       |    |         |     |    |         |     |    |   |       |           |   |       |           |

| Notes:<br>1. The North American F-86K Sabre-Dog is a single-engined, swept-wing, all-weather interceptor. The F-86K version is a derivative of the F-86D and has four 20 mm Mk24 cannons in place of the rocket armament of the earlier version and the simpler MG-4 fire-control system. This variant is the original with the early slatted wing.<br>2. High transonic drag (HTD). |  |           |  |           |                     |           |  |       |  | 1. | 1. The North American F-86K Sabre-Dog is a single-engined, swept-wing, all-weather interceptor. The F-86K version is a derivative of the F-86D and has four 20 mm Mk24 cannons in place of the rocket armament of the earlier version and the simpler MG-4 fire-control system. This variant has the slatted, extended 6-3 wing. |                |                    |     | 2. May use 120 gal (450L) FTs.            |               |                      |

| <b>Notes:</b><br>1. The North American F-86L Sabre-Dog is a single-engined, swept-wing, all-weather interceptor. It is armed with 24 FFARs in a ventral tray. The APG-36 radar and Hughes E-4 fire-control system allow collision-course rocket attacks. The F-86L is a derivative of the F-86D and has the slatted, extended 6-3 wing and a SAGE data-link. |                                                                                      | <b>Load Notes:</b><br>1. Stations must be loaded symmetrically.<br>2. May use 120 gal (450L) FTs.<br>3. From 1958, may use AIM-9B IRMs.<br>4. Station 3 is an internal rocket tray with 2 factors of air-to-air rockets.                                                                |         |       |               |         |       |    |         |     |     |   |   |  |

The wing-tip stations 1 and 2 usually carry 165 gal (600L) FTs, each with a weight of 1100, 3.0/2.0 load points, and 50 fuel points. |  |           |  |           |  |
| Notes:                                                                                                                                                                                                                                                                            |  |           |  |           |                                        |           |                    |       |  |                                                                                                                                         |  |           |  |           |  |
| 1. The Lockheed F-94A is an all-weather interceptor. It is derived from the T-33A trainer, but adds the APG-33 radar and the Hughes E-1 fire-control system. It is armed with four .50-cal machine guns, and the fire-control system allows them to be fired under radar control. |  |           |  |           |                                        |           |                    |       |  |                                                                                                                                         |  |           |  |           |  |
| 2. High transonic drag (HTD).                                                                                                                                                                                                                                                     |  |           |  |           |                                        |           |                    |       |  |                                                                                                                                         |  |           |  |           |  |
| 3. The E1 all-weather fire-control system allows the guns to be fired on targets that are unsighted but tracked by radar if the radar-ranging attempt succeeds.                                                                                                                   |  |           |  |           |                                        |           |                    |       |  |                                                                                                                                         |  |           |  |           |  |

| Notes:<br>1. The Lockheed F-94B is an all-weather interceptor. It is a development of the F-94A and features a more reliable engine and modifications to the cockpit. It retains the APG-33 radar and the Hughes E-1 fire-control system. It is armed with four .50 cal machine guns, and the fire-control system allows them to be fired under radar control.<br>2. High transonic drag (HTD).<br>3. The E1 all-weather fire-control system allows the guns to be fired on targets that are unsighted but tracked by radar if the radar-ranging attempt succeeds. |  |           |  |           |                                        |           |                    |       |  | Load Notes:                                                                                                                             |  |           |  |           |  |

| Notes:<br>1.<br>2. High transonic drag (HTD).<br>3. The E-9 fire-control system provides CC Rocket Attack technology. |             |                |     |           |                                                                                                                                                                                        |           |     |                    |  | Load Notes:<br>1. Stations 1 and 4 are fixed wing-tip pods for rockets, missiles, and fuel. Each can carry 2 factors of air-to-air rockets, giving a total of 4 factors for with pods. Each can also carry three RHM/IRM. The pod fuel is included in the internal fuel.<br>2. May use GAR-1/-1D RHMs and GAR-2/-2A IRMs. Typically carries three RHMs in one pod and three IRMs in the other. |      |            |      |           |      |     |  |  |

| <b>Notes:</b><br>1.<br>2. High transonic drag (HTD).<br>3. The MG-12 fire-control system provides CC Rocket Attack technology. |                |                    | <b>Load Notes:</b><br>1. Stations 1 and 8 are fixed wing-tip pods for rockets and fuel. Each can carry 4.5 factors of air-to-air rockets, giving a total of 9 factors with both pods. The pod fuel is included in the internal fuel.<br>2. May use AIR-2A nuclear RK.<br>3. May use GAR-2/-2A IRM. |                                 |                                   |                      |
|                                                                                                                                |                |                    |                                                                                                                                                                                                                                                                                                    |                                 |                                   |                      |

 | 2. High transonic drag (HTD).                                                                                                                                                                                                       |  |           |  |           |                                       |           |  |       |  |                                                      |  |        |  |        |                                   |     |  |  |  |  |  |  |  |  |
| 3. Tail Radar. Equipped with an APS-54 tail radar with ECCM 1, arc 60–, search 30–10, track 15–10, and lock-on 7–.                                                                                                                  |  |           |  |           |                                       |           |  |       |  |                                                      |  |        |  |        |                                   |     |  |  |  |  |  |  |  |  |
| 4. Articulated Guns. The guns can only fire at locked-on targets in the 60– arc. They may return fire twice per game turn in response to gun attacks or conduct one gun attack. The hit rolls are modified only by the target size. |  |           |  |           |                                       |           |  |       |  |                                                      |  |        |  |        |                                   |     |  |  |  |  |  |  |  |  |
